- **365 Days** Free Update
- **800,000+** Satisfied Customers

**QUESTION 1**

A customer that has a large enterprise SAP environment plans to migrate to Azure. The environment uses servers that run Windows Server 2016 and Microsoft SQL Server.

The environment is critical and requires a comprehensive business continuity and disaster recovery (BCDR) strategy that minimizes the recovery point objective (RPO) and the recovery time objective (RTO).

The customer wants a resilient environment that has a secondary site that is at least 250 kilometers away.

You need to recommend a solution for the customer.

Which two solutions should you recommend? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

A. warm standby virtual machines in paired regions

B. Azure Traffic Manager to route incoming traffic

C. warm standby virtual machines in an Azure Availability Set that uses geo-redundant storage (GRS)

D. an internal load balancer to route Internet traffic

E. warm standby virtual machines in Azure Availability Zones

Correct Answer: AC

A: An Azure Region Pair is a relationship between two Azure Regions within the same geographic region for disaster recovery purposes. If one of the regions were to experience a disaster or failure, then the services in that region will automatically failover to that regions secondary region in the pair.

C: For increased availability, you can deploy two VMs with two HANA instances within an Azure availability set that uses HANA system replication for availability.

**QUESTION 2**

You have an SAP Cloud Platform subscription and an Azure Active Directory (Azure AD) tenant.

You need to ensure that Azure AD users can access SAP Cloud App by using their Azure AD credentials.

What should you configure?

A. Active Directory Domain Services (AD DS)

B. SAP Cloud Platform Identity Authentication

C. A conditional access policy

D. SAP Cloud Connector

Correct Answer: A

When you integrate SAP Cloud Platform Identity Authentication with Azure AD, you can:

1.

Control in Azure AD who has access to SAP Cloud Platform Identity Authentication.

2.

Enable your users to be automatically signed-in to SAP Cloud Platform Identity Authentication with their Azure AD accounts.

3.

Manage your accounts in one central location - the Azure portal.

Reference: https://docs.microsoft.com/en-us/azure/active-directory/saas-apps/sap-hana-cloud-platform-identity-authentication-tutorial

**QUESTION 3**

HOTSPOT

You have an Azure subscription that contains a resource group named RG1. The role assignments for RG1 are shown in the following exhibit.

```
Azure:/
PS Azure:\> Get-AZRoleAssignment -ResourceGroupName RG1 | Where DisplayName –Like "user*"
  | Select  DisplayName, RoleDefinitionName

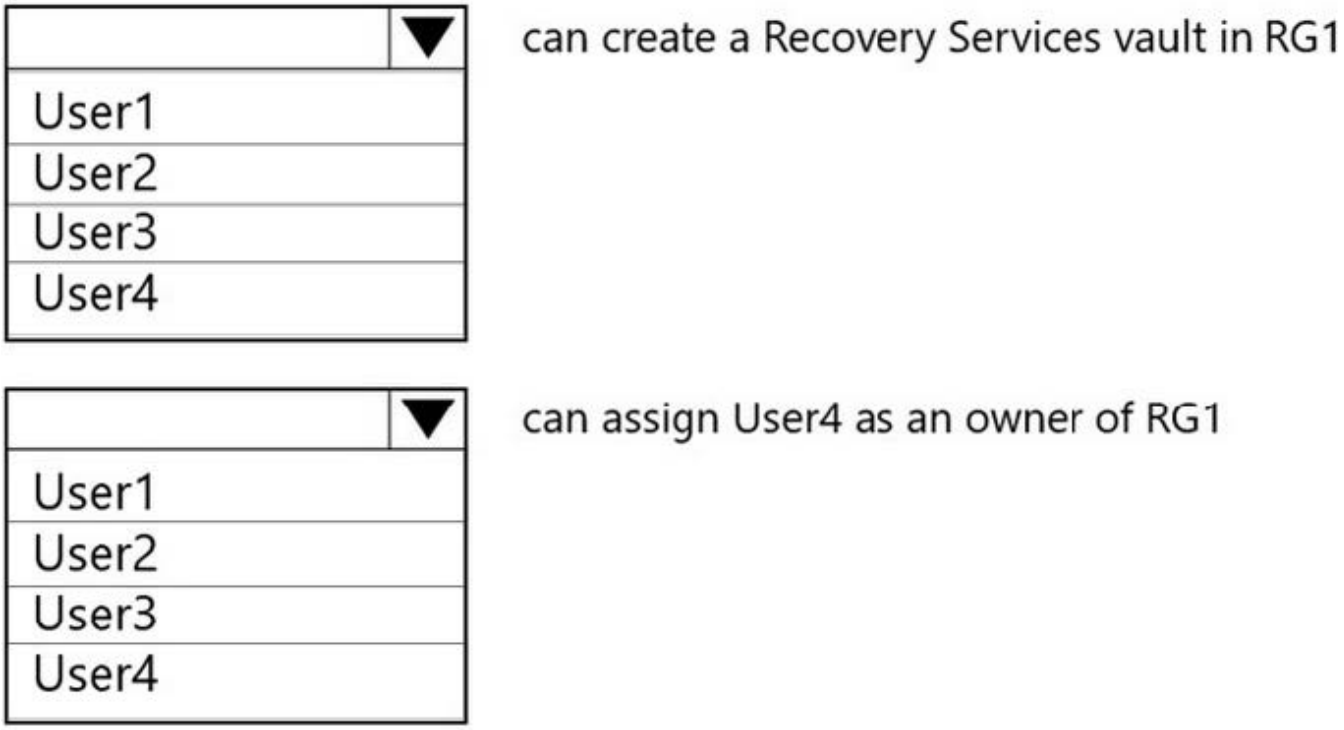
DisplayName RoleDefinitionName
----------- ----------------------
User3       User Access Administrator
User2       Backup Contributor
User1       Contributor
User4       Security Admin
```

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

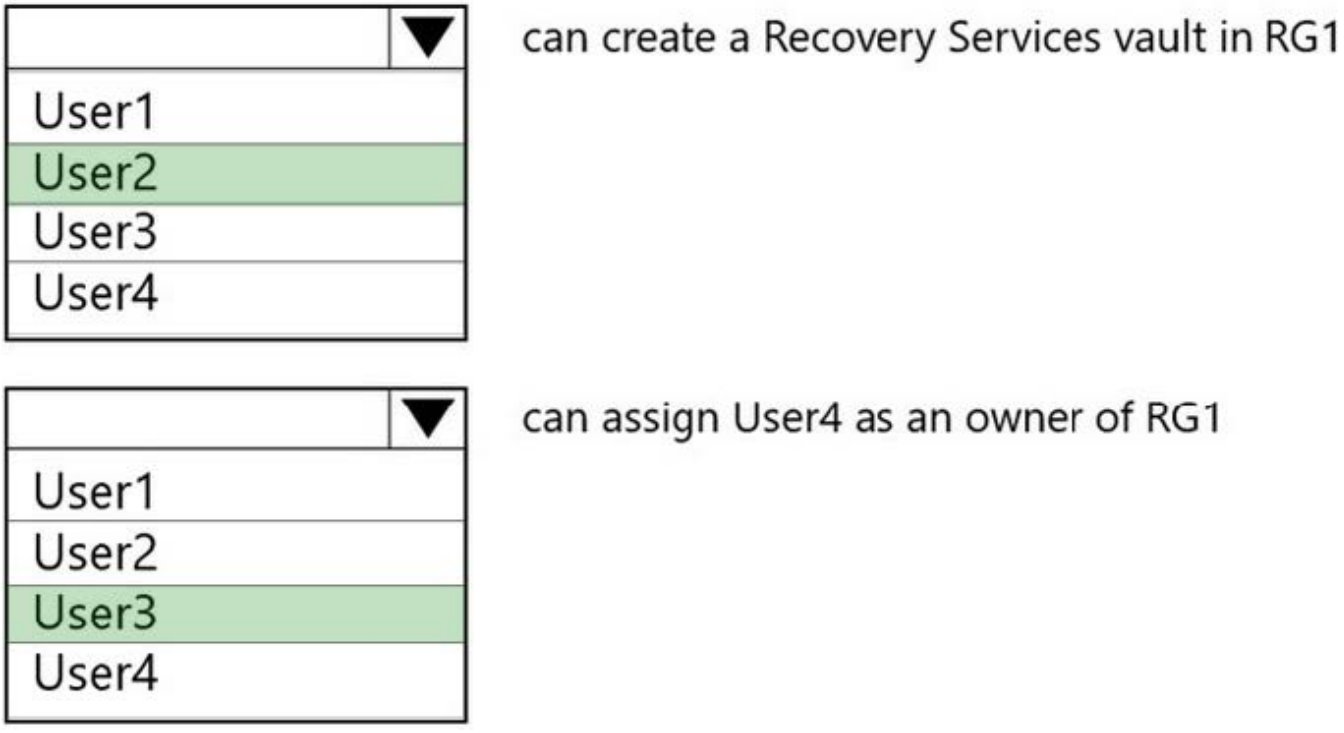
Hot Area:

## Answer Area



Correct Answer:

## Answer Area



Box 1: User2

| Management Operation | Minimum Azure role required | Scope Required |
|---|---|---|
| Create Recovery Services vault | Backup Contributor | Resource group containing the vault |

Note:

Backup Contributor - This role has all permissions to create and manage backup except deleting Recovery Services vault and giving access to others. Imagine this role as admin of backup management who can do every backup management

operation.

Box 2: User3

The User Access Administrator role lets you manage user access to Azure resources.

https://docs.microsoft.com/en-us/azure/backup/backup-rbac-rs-vault

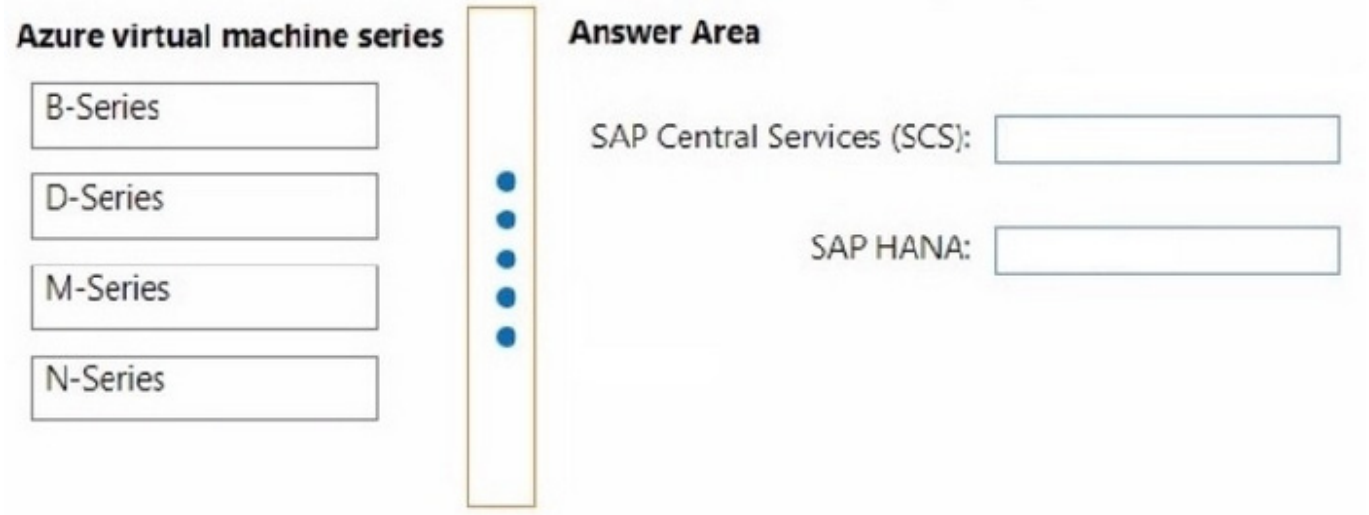
https://docs.microsoft.com/en-us/azure/role-based-access-control/built-in-roles

**QUESTION 4**

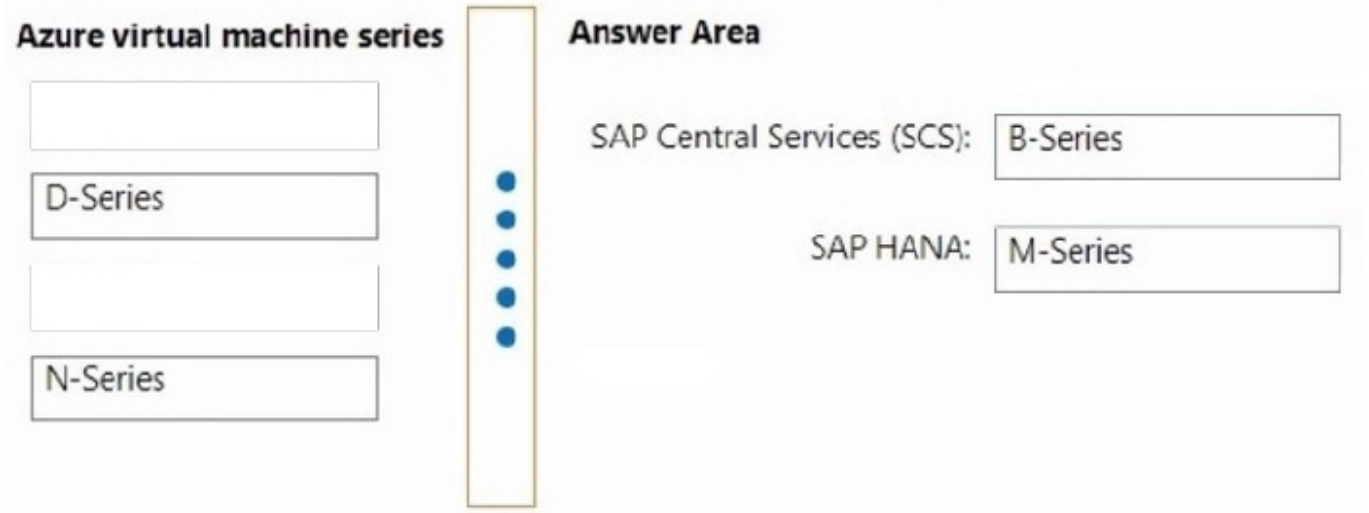
DRAG DROP You need to deploy an SAP production landscape on Azure. The solution must be supported by the SAP production landscape and must minimize costs. Which Azure virtual machine series should you use for each SAP workload? To answer, drag the appropriate series to the correct workloads. Each series may be used once, more than once, or not at all. You may need to drag the split bar

between panes or scroll to view content. NOTE: Each correct selection is worth one point.

Select and Place:



Correct Answer:



**QUESTION 5**

A customer enterprise SAP environment plans to migrate to Azure. The environment uses servers that runs Windows Server 2016 and Microsoft SQL Server. The environment is critical and requires a comprehensive business continuity and disaster recovery (BCDRJ strategy that minimizes the recovery point objective (RPO) and the recovery time objective (RTO). The customer wants a resilient environment that has a secondary site that is at least 250 Kilometers away. You need to recommend a solution for the customer.

Which two solutions should you recommend?

Each correct answer presents part ot the solution. NOTE; Each correct selection Is worth one point.

A. an internal load balancer to route Internet traffic

B. warm standby virtual machines in Azure Availability Zones.

C. warn standby virtual machines in paired regions

D. Warm standby virtual machine an Azure Availability Set that uses geo-redundant storage (GRS)

E. Azure Traffic Manager to route incoming traffic.

Correct Answer: CD
