You have an Azure Storage account named store1 that stores FSLogix profile containers in a share named profiles.

You need to configure the path to the storage containers for the session hosts.

Which path should you use?

- A. \\store1.blob.core.windows.net\profiles

QUESTION 4

Your company has 60,000 users.

You plan to deploy Azure Virtual Desktop.

You need to recommend a storage solution for the FSLogix profile containers. The solution must provide the highest possible IOPS and the lowest latency desktop experience.

What should you recommend?

- A. Azure Data Lake Storage
- B. Azure NetApp Files
- C. Azure Blob Storage Premium
- D. Azure Files Standard

Correct Answer: B

Run your most demanding Linux and Windows file workloads in Azure

Running performance-intensive and latency-sensitive file workloads in the cloud can be hard. Azure NetApp Files makes it easy for enterprise line-of-business (LOB) and storage professionals to migrate and run complex, file-based applications with no code change. Azure NetApp Files is widely used as the underlying shared file-storage service in various scenarios. These include migration (lift and shift) of POSIX-compliant Linux and Windows applications, SAP HANA,

databases, high-performance compute (HPC) infrastructure and apps, and enterprise web applications.

Azure Files has a 3-ms latency, whereas Azure NetApp Files has a 1-ms latency. Therefore, among the options, Azure NetApp Files is the solution with the lowest latency for FSLogix profile containers.
