QUESTION 1

You have an Azure Virtual Desktop deployment.

You use the Start/Stop VMs during off-hours feature in Azure.

You need to configure which virtual machines must never be stopped by the solution.

What should you configure?

- A. the Diagnostic settings of the host pool
- B. the Start-Stop-VM task
- C. an Azure Automation account variable
- D. an action group

Correct Answer: C

QUESTION 2

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a Windows Virtual Desktop host pool named Pool1 that is integrated with an Azure Active Directory Domain Services (Azure AD DS) managed domain.

You need to configure idle session timeout settings for users that connect to the session hosts in Pool1.

Solution: From an Azure AD DS-joined computer, you modify the AADDC Computers GPO settings.

Does that meet the goal?

- A. Yes
- B. No

Correct Answer: A

QUESTION 3

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution,

while

others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a Windows Virtual Desktop host pool named Pool1 that is integrated with an Azure Active Directory Domain Services (Azure AD DS) managed domain.

You need to configure idle session timeout settings for users that connect to the session hosts in Pool1.

Solution: From the Azure portal, you modify the Session behavior settings in the RDP Properties of Pool1.

Does that meet the goal?

A. Yes

B. No

Correct Answer: B

Computer Configuration > Administrative Templates > Windows Components > Remote Desktop Services > Remote Desktop Session Host > Session Time Limits

QUESTION 4

HOTSPOT

You have an Azure Virtual Desktop deployment that contains a host pool named Pool1. Pool1 contains two session hosts. Pool1 is configured as shown in the following exhibit.

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE- Each correct selection is worth one point.

Name
Pool1

Configuration

Personal desktop: Yes No

Start VM on connect: No Yes

Validation environment: No Yes

Friendly name:

Description: Created through the Azure Virtual Desktop extension

Load balancing algorithm: Depth-first

Max session limit: 5

Hot Area:

Service updates will be applied to Pool1 [answer choice].

- once every 30 days
- as soon as the updates are released
- once every 30 days
- once the updates are generally available

New user connections will be [answer choice].

- connected to the session host that has the highest number of existing connections and has not reached the maximum session limit
- connected to the session host that has the highest number of existing connections and has not reached the maximum session limit
- evenly distributed across all available hosts
- rejected once five sessions are established

Correct Answer:

Service updates will be applied to Pool1 [answer choice].

- once every 30 days
- as soon as the updates are released
- once every 30 days
- once the updates are generally available

New user connections will be [answer choice].

- connected to the session host that has the highest number of existing connections and has not reached the maximum session limit
- connected to the session host that has the highest number of existing connections and has not reached the maximum session limit
- evenly distributed across all available hosts
- rejected once five sessions are established

QUESTION 5

You deploy an Azure Virtual Desktop session host pool.

You need to provide a group of pilot user's access to the virtual machines in the pool.

What should you do?

- A. Create a role definition.
- B. Add the users to a Remote Desktop Users group on the virtual machines.
- C. Add the users to the local Administrators group on the virtual machines.
- D. Create a role assignment.

Correct Answer: D
