## QUESTION 1

A company is migrating an existing on-premises third-party website to Azure. The website is stateless.

The company does not have access to the source code for the website. They do have the original installer.

The number of visitors at the website varies throughout the year. The on-premises infrastructure was resized to accommodate peaks but the extra capacity

You need to implement a virtual machine scale set instance.

What should you do?

- A. Use an auto scale setting to scale instances vertically.
- B. Use only default diagnostics metrics to trigger auto scaling.
- C. Use Azure Monitor to create auto scale settings using custom metrics.
- D. Scale out by one instance when the average CPU usage of one of the instances is over 80 percent.

Correct Answer: A

## QUESTION 2

DRAG DROP

You are developing a .NET Core Web Job that is triggered by an Azure Storage Queue.

The project uses dependency injection from the NuGet package Microsoft.Extensions.DependencyInjection. The Webjob logic is contained in the Worker class. The program.cs file contains the following code:

```
static void Main()
{
    var sc = new ServiceCollection();
    sc.AddSingleton<Worker>();
    var sp = sc.BuildServiceProvider();
    var jobHostConfig = new JobHostConfiguration()
    {
        JobActivator = new Helper(sp),
    };
    var host = new JobHost(jobHostConfig);
    host.RunAndBlock();
}
```

You need to ensure that the Worker class can run when an Azure Storage Queue message arrives.

Which code segments should you use to complete the code? To answer, drag the appropriate code segments to the correct locations. Each code segment may be used once, more than once, or not at all. You may need to drag the split bar

between panes or scroll to view content

NOTE: Each correct selection is worth one point.

Select and Place:

The screenshot shows a 'Code Segments' list on the left with the following items: IJobActivator, IServiceProvider, IExtensionRegistry, IExtensionConfigProvider, and ITriggeredFunctionExecutor. The 'Answer Area' on the right shows a code editor with the following code:

```

public class Helper
{
    private readonly Code segment _x;
    public Helper( Code segment x)
    {
        this._x = x;
    }
    public T CreateInstance<T>()
    {
        return this._x.GetService<T>();
    }
}

```

Correct Answer:

The screenshot shows the 'Code Segments' list on the left with IJobActivator, IExtensionRegistry, and ITriggeredFunctionExecutor highlighted. The 'Answer Area' on the right shows the code editor with the following code:

```

public class Helper : IServiceProvider
{
    private readonly IExtensionConfigProvider _x;
    public Helper( ITriggeredFunctionExecutor i)
    {
        this._x = x;
    }
    public T CreateInstance<T>()
    {
        return this._x.GetService<T>();
    }
}

```

### QUESTION 3

DRAG DROP

You need to add code at line EG15 in EventGridControHer.es to ensure that the Log policy applies to all services.

Allow should you complete the code? To answer, drag the appropriate code segments to the correct locations. Each code segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll

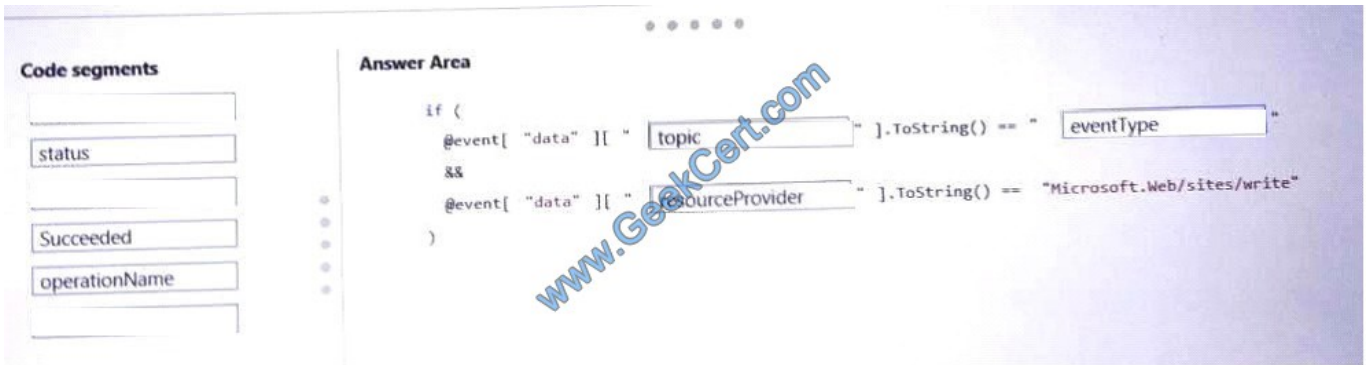

to view content.

NOTE: Each correct selection is worth one point.

Select and Place:

Correct Answer:

#### QUESTION 4

A company is developing a solution that allows smart refrigerators to send temperature information to a central location.

The solution must receive and store messages until they can be processed. You create an Azure Service Bus instance by providing a name, pricing tier, subscription, resource group, and location.

You need to complete the configuration.

Which Azure CLI or PowerShell command should you run?

- A. 

```
New-AzureRmServiceBusQueue
-ResourceGroupName fridge-rg
-NamespaceName fridge-ns
-Name fridge-q
-EnablePartitioning $false
```
- B. 

```
az group create
--name fridge-rg
--location fridge-loc
```
- C. 

```
Get-AzureRmServiceBusKey
-ResourceGroupName fridge-rg
-Namespace fridge-ns
-Name RootManagementSharedAccessKey
```
- D. 

```
az servicebus namespace create
--resource-group fridge-rg
--name fridge-ns
--location fridge-loc
```

A. B. C. D.

Correct Answer: D

## QUESTION 5

You need to resolve the delivery API error. What should you do?

- A. Implement simple retry by using the Enable Retry On Failure feature of Entity framework.
- B. Implement exponential backoff by using the EnableRetryOnFailure feature of Entity Framework,
- C. Implement the Circuit Breaker pattern by using the Enable Retry On Failure feature of Entity Framework.
- D. Invoke custom execution strategy in Entity Framework.

Correct Answer: A
