## QUESTION 1

You have a Recovery Service vault that you use to test backups. The test backups contain two protected virtual machines.

You need to delete the Recovery Services vault.

What should you do first?

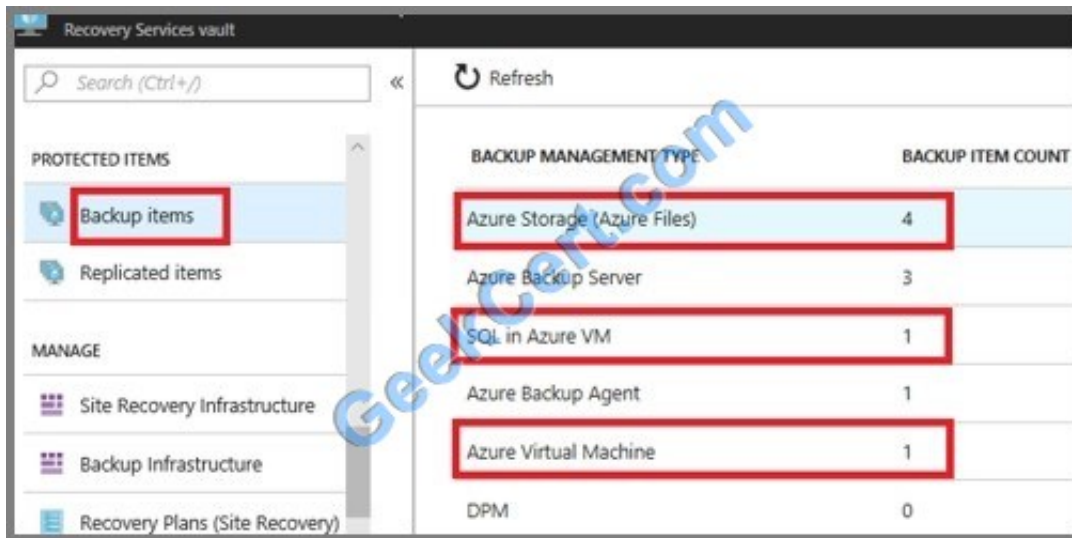

- A. From the Recovery Service vault, delete the backup data
- B. Modify the disaster recovery properties of each virtual machines
- C. Modify the locks of each virtual machine
- D. From the Recovery Service vault, stop the backup of each backup item

Correct Answer: D

You can't delete a Recovery Services vault if it is registered to a server and holds backup data. If you try to delete a vault, but can't, the vault is still configured to receive backup data.

Remove vault dependencies and delete vault

In the vault dashboard menu, scroll down to the Protected Items section, and click Backup Items. In this menu, you can stop and delete Azure File Servers, SQL Servers in Azure VM, and Azure virtual machines.

## QUESTION 2

You have an Azure subscription that contains two storage accounts named storagecontoso1 and storagecontoso2. Each storage account contains a queue service, a table service, and a blob service.

You develop two apps named App1 and App2. You need to configure the apps to store different types of data to all the

storage services on both the storage accounts.

How many endpoints should you configure for each app?

- A. 2
- B. 3
- C. 6
- D. 12

Correct Answer: A

Each app needs a service endpoint in each Storage Account.

### QUESTION 3

Note: This question is part of series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You are planning to create a virtual network that has a scale set that contains six virtual machines (VMs).

A monitoring solution on a different network will need access to the VMs inside the scale set.

You need to define public access to the VMs.

Solution: Implement an Azure Load Balancer.

Does the solution meet the goal?

- A. Yes
- B. No

Correct Answer: B

---

### QUESTION 4

You have an app named App1 that uses data from two on-premises Microsoft SQL Server databases named DB1 and DB2.

You plan to move DB1 and DB2 to Azure.

You need to implement Azure services to host DB1 and DB2. The solution must support server-side transactions across DB1 and DB2.

Solution: You deploy DB1 and DB2 to SQL Server on an Azure virtual machine.

Does this meet the goal?

A. Yes

B. NO

Correct Answer: B

## QUESTION 5

You need to meet the connection requirements for the New York office.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

### Answer Area

From the Azure portal:

|   |
|---|
| Create an ExpressRoute circuit only.                              |
| Create a virtual network gateway only.                            |
| Create a virtual network gateway and a local network gateway.     |
| Create an ExpressRoute circuit and an on-premises data gateway.   |
| Create a virtual network gateway and an on-premises data gateway. |

In the New York office:

|  |
|--|
| Deploy ExpressRoute.                     |
| Deploy a DirectAccess server.            |
| Implement a Web Application Proxy.       |
| Configure a site-to-site VPN connection. |

Correct Answer:

## Answer Area

From the Azure portal:

|   |
|---|
| Create an ExpressRoute circuit only.                              |
| Create a virtual network gateway only.                            |
| Create a virtual network gateway and a local network gateway.     |
| Create an ExpressRoute circuit and an on-premises data gateway.   |
| Create a virtual network gateway and an on-premises data gateway. |

In the New York office:

|  |
|--|
| Deploy ExpressRoute.                     |
| Deploy a DirectAccess server.            |
| Implement a Web Application Proxy.       |
| Configure a site-to-site VPN connection. |

Box 1: Create a virtual network gateway and a local network gateway.

Azure VPN gateway. The VPN gateway service enables you to connect the VNet to the on-premises network through a VPN appliance. For more information, see [Connect an on-premises network to a Microsoft Azure virtual network](#). The

VPN gateway includes the following elements:

1.

Virtual network gateway. A resource that provides a virtual VPN appliance for the VNet. It is responsible for routing traffic from the on-premises network to the VNet.

2.

Local network gateway. An abstraction of the on-premises VPN appliance. Network traffic from the cloud application to the on-premises network is routed through this gateway.

3.

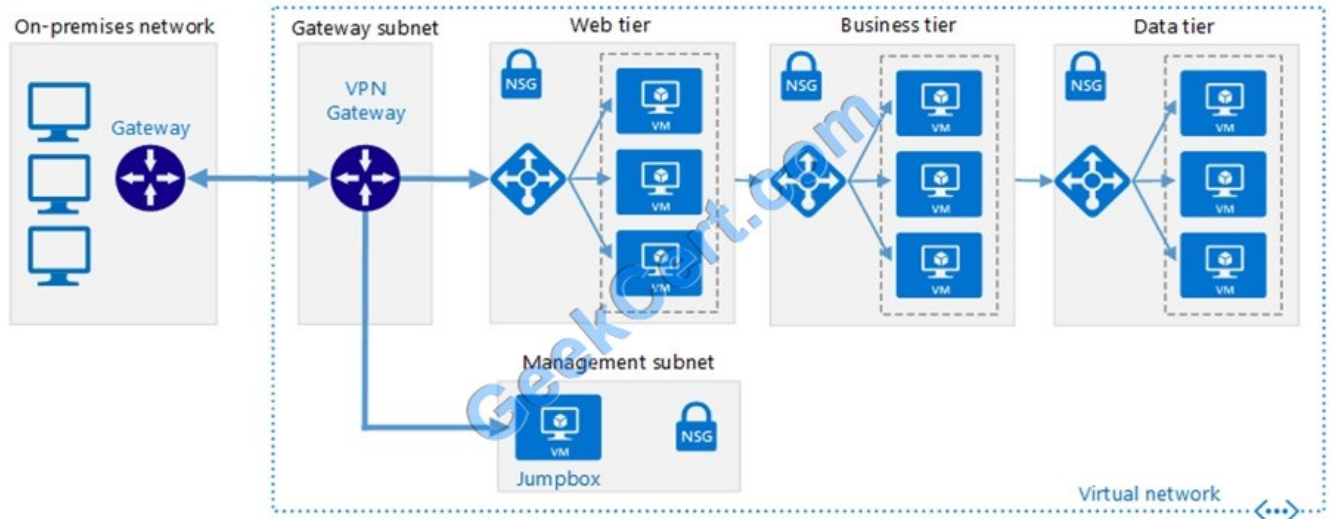

Connection. The connection has properties that specify the connection type (IPSec) and the key shared with the on-premises VPN appliance to encrypt traffic.

4.

Gateway subnet. The virtual network gateway is held in its own subnet, which is subject to various requirements, described in the Recommendations section below.

Box 2: Configure a site-to-site VPN connection

On premises create a site-to-site connection for the virtual network gateway and the local network gateway.

Scenario: Connect the New York office to VNet1 over the Internet by using an encrypted connection.

Incorrect Answers:

Azure ExpressRoute: Established between your network and Azure, through an ExpressRoute partner. This connection is private. Traffic does not go over the internet.
