QUESTION 1

A company hosts a highly available application using Azure Load Balancer.

A virtual machine (VM) on the backend pool stops responding to health probes. The health probes are configured to use HTTP.

You are troubleshooting the incoming traffic issue. You run a Netsh trace on port 80. No incoming packets are detected on the VM. Outgoing packets are detected.

What is the cause of the issue?

- A. A network security group is preventing incoming traffic to the port.
- B. A proxy is configured.
- C. Session persistence is configured.
- D. An application on the VM is blocking the port.

Correct Answer: A

QUESTION 2

A company implements self-service password reset (SSPR).

After a firewall upgrade at the company's datacenter, SSPR stops working.

You need to resolve the issue.

Which two URLs must be present on the firewalls to allow SSPR to connect?

- A. *.update.microsoft.com
- B. *.servicebus.windows.net
- C. *.passwordreset.microsoftonline.com
- D. *.svc.ms
- E. *.adl.windows.com

Correct Answer: BC

<https://techcommunity.microsoft.com/t5/azure/self-service-password-reset-urls-and-ip-address-ranges/m-p/443239>

QUESTION 3

A company plans to implement ExpressRoute by using the provider connectivity model.

The company creates an ExpressRoute circuit. You are unable to connect to resources through the circuit.

You need to determine the provisioning state of the service provider.

Which PowerShell cmdlet should you run?

- A. Get-AzExpressRouteCircuitPeeringConfig
- B. Get-AzExpressRouteCircuitRouteTable
- C. Get-AzExpressRouteCircuitConnectionConfig
- D. Get-AzExpressRouteCircuit
- E. Get-AzExpressRouteCircuitARPTTable

Correct Answer: D

<https://learn.microsoft.com/en-us/powershell/module/az.network/get-azexpressroute-circuit?view=azps-9.3.0#example-1-get-the-expressroute-circuit>

The output of command Get-AzExpressRouteCircuit looks like this : Name : test ResourceGroupName : testrg Location : southcentralus Id : /subscriptions/00000000-0000-0000-0000-000000000000/resourceGroups/testrg/providers/Microsoft.Network/expressRouteCircuits/test Etag : W/"00000000-0000-0000-0000-000000000000" ProvisioningState : Succeeded

QUESTION 4

A company migrates an on-premises Windows virtual machine (VM) to Azure. An administrator enables backups for the VM by using the Azure portal.

The company reports that the Azure VM backup job is failing.

You need to troubleshoot the issue.

Solution: Install the VM guest agent by using administrative permissions. Does the solution meet the goal?

- A. Yes
- B. No

Correct Answer: A

Yes, installing the VM guest agent by using administrative permissions could resolve the issue of the Azure VM backup job failing after enabling backups for the VM through the Azure portal. When backing up a virtual machine in Azure, it is

necessary to install the VM guest agent to enable proper communication between the VM and the backup service. An administrative user account is required to install the agent. Therefore, the solution mentioned in the question is correct and

the answer is A. Yes.

Back up a virtual machine in Azure (Microsoft documentation)

QUESTION 5

HOTSPOT

A company has an Azure Active Directory (Azure AD) tenant. You are assigned the Owner role-based access control (RBAC) role of an Azure resource group named RG1.

An administrator grants a user named User1 the Contributor RBAC role for RG1. User1 receives an authorization error when attempting to create a Cosmos DB account in RG1.

The administrator verifies that they can create a Cosmos DB account in RG1.

You need to troubleshoot the issue.

What should you do?

Hot Area:

Requirement	Action
Determine the cause of the issue.	<ul style="list-style-type: none">Review the resource locks of RG1.Review the deny assignments of RG1.Review the list of classic administrators for the subscription.
Resolve the issue.	<ul style="list-style-type: none">Configure Azure resource locks.Configure RBAC role assignments.Configure Azure Blueprints locking mode.

Correct Answer:

Requirement	Action
Determine the cause of the issue.	<ul style="list-style-type: none">Review the resource locks of RG1.Review the deny assignments of RG1.Review the list of classic administrators for the subscription.
Resolve the issue.	<ul style="list-style-type: none">Configure Azure resource locks.Configure RBAC role assignments.Configure Azure Blueprints locking mode.
