### QUESTION 1

A company uses an Azure VPN gateway to connect to their on-premises environment.

The company's on-premises VPN gateway is used by several services. One service is experiencing connectivity issues.

You need to minimize downtime for all services and resolve the connectivity issue.

Which three actions should you perform?

- A. Configure the hashing algorithm to be different on both gateways.
- B. Rest the VPN gateway.
- C. Configure the pre-shared key to be the same on the Azure VPN gateway and the on- premises VPN gateways.
- D. Rest the VPN connection.
- E. Configure the hashing algorithm to be the same on both gateways.
- F. Configure the pre-shared key to be different on the Azure VPN gateway and the on- premises VPN gateways.

Correct Answer: CDE

---

### QUESTION 2

A company configures an Azure DNS delegated domain.

The DNS zone is marked as degraded.

You need to determine the root cause for the issue.

What are two potential causes for the issue? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. The zone contains A records.
- B. The zone contains only name server delegation records.
- C. The zone contains only glue records.
- D. The zone contains an MX record.
- E. The zone is empty.

Correct Answer: AD

### QUESTION 3

A company migrates existing Ubuntu Linux servers from their on-premises vSphere infrastructure to Azure.

The virtual machines (VMs) are experiencing a low network throughput of 20 Mbps. The VMs are expected to sustain 300 Mbps.

You need to ensure that the VMs are compatible with Azure.

Which change should you make?

- A. Install a kernel name that ends with -azure.
- B. Configure the network interfaces to 1000 Mbps/full duplex.
- C. Redeploy the VM with Accelerated Networking enabled.
- D. Increase the TCP buffers and window size kernel parameters.

Correct Answer: C

To ensure that Ubuntu Linux servers are compatible with Azure and to increase network throughput from 20 Mbps to 300 Mbps, you should redeploy the VM with Accelerated Networking enabled. Therefore, option C is correct. You should redeploy the VM with Accelerated Networking enabled.

### QUESTION 4

#### HOTSPOT

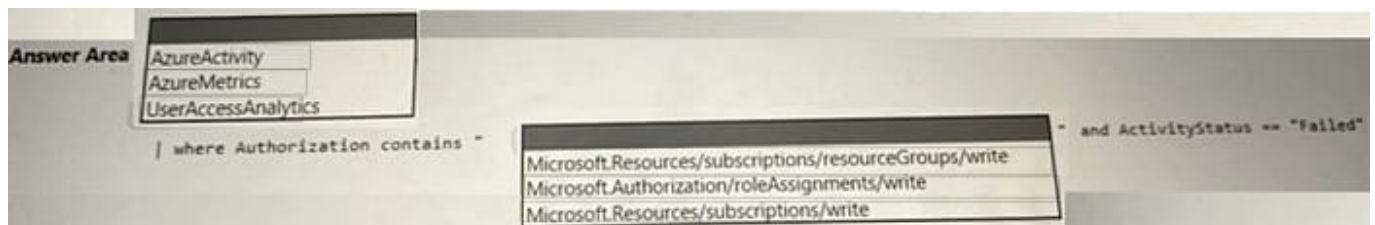

A company uses Azure Active Directory (Azure AD) with Azure role-based access control (RBAC) for access to resources.

Some users report that they are unable to grant RBAC roles to other users.

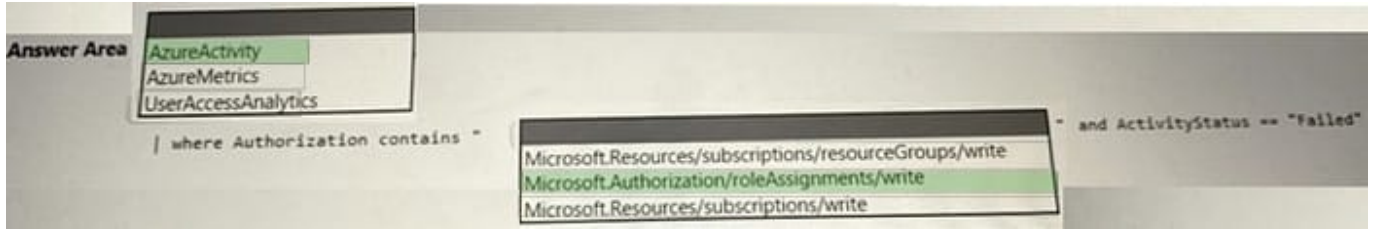

You need to troubleshoot the issue.

How should you complete the Azure Monitor query?

Hot Area:

Correct Answer:

### QUESTION 5

#### HOTSPOT

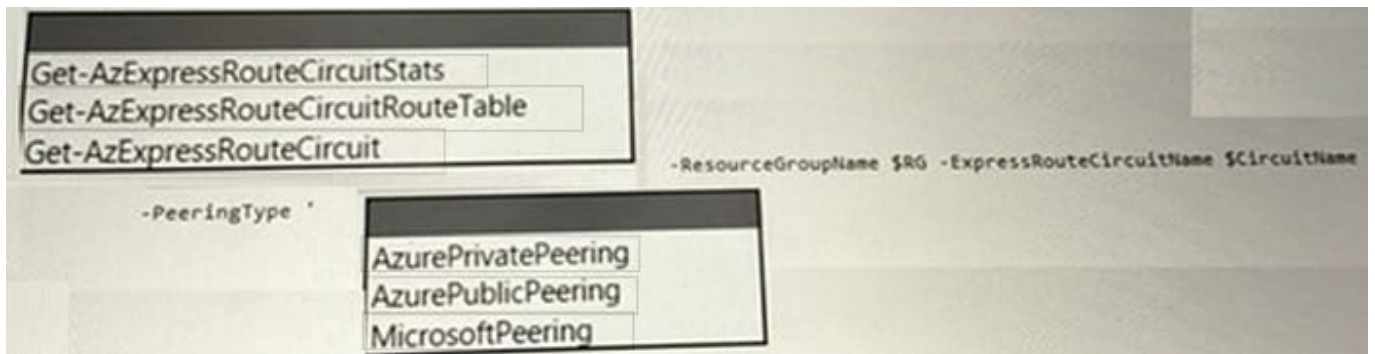

A company connects an on-premises network to an Azure virtual network by using ExpressRoute.

The ExpressRoute connection is experiencing higher than normal latency.

You need to confirm the traffic flow.

How should you complete the PowerShell command?

Hot Area:

Correct Answer:
