### QUESTION 1

You have an Azure virtual machine named Server1 that runs a network management application. Server1 has the following network configurations:

1.

Network interface: Nic1

2.

IP address: 10.1.1.1/24

3.

Connected to: Vnet1/Subnet1

You need to connect Server1 to an additional subnet named Vnet1/Subnet2.

What should you do?

- A. Modify the IP configurations of Nic1.
- B. Add an IP configuration to Nic1.
- C. Add a network interface to Server1.
- D. Create a private endpoint on Subnet2.

Correct Answer: C

First add another network interface to Server1, then connect it to Subnet2.

Virtual network and subnets.

A subnet is a range of IP addresses in the virtual network. You can divide a virtual network into multiple subnets for organization and security. Each NIC in a VM is connected to one subnet in one virtual network. NICs connected to subnets

(same or different) within a virtual network can communicate with each other without any extra configuration.

### QUESTION 2

Your network contains an Active Directory Domain Services (AD DS) domain.

You have a Group Policy Object (GPO) named GPO1 that contains Group Policy preferences.

You plan to link GPO1 to the domain.

You need to ensure that the preference in GPO1 apply only to domain member servers and NOT to domain controllers or client computers. All the other Group Policy settings in GPO1 must apply to all the computers. The solution must minimize administrative effort.

Which type of item level targeting should you use?

- A. Domain
- B. Operating System
- C. Security Group
- D. Environment Variable

Correct Answer: B

### QUESTION 3

DRAG DROP

You have a server named Server1 that has Windows Admin Center installed. The certificate used by Windows Admin Center was obtained from a certification authority (CA).

The certificate expires.

You need to replace the certificate.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

### Actions

Copy the certificate thumbprint.

From Internet Information Services (IIS) Manager, bind a certificate.

Rerun **Windows Admin Center Setup** and select **Change**.

Rerun **Windows Admin Center Setup** and select **Repair**.

Rerun **Windows Admin Center Setup** and select **Remove**.

### Answer Area

Correct Answer:

### Actions

### Answer Area

From Internet Information Services (IIS) Manager, bind a certificate.

Copy the certificate thumbprint.

Rerun **Windows Admin Center Setup** and select **Change**.

Rerun **Windows Admin Center Setup** and select **Repair**.

Rerun **Windows Admin Center Setup** and select **Remove**.

### QUESTION 4

You have an Azure virtual machine named VM1 that runs Windows Server.

You need to configure the management of VM1 to meet the following requirements:

1.

Require administrators to request access to VM1 before establishing a Remote Desktop connection.

2.

Limit access to VM1 from specific source IP addresses.

3.

Limit access to VM1 to a specific management port. What should you configure?

A. a network security group (NSG)

B. Azure Active Directory (Azure AD) Privileged Identity Management (PIM)

C. Microsoft Defender for Cloud

D. Azure Front Door

Correct Answer: C

Reference: <https://docs.microsoft.com/en-us/azure/defender-for-cloud/just-in-time-access-usage?tabs=jit-config-asc%2Cjit-request-asc>

## QUESTION 5

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You are planning the deployment of DNS to a new network.

You have three internal DNS servers as shown in the following table.

Name	Location	IP address	Local DNS zone
Server1	Montreal	10.0.1.10	contoso.local
Server2	Toronto	10.0.2.10	east.contoso.local
Server3	Seattle	10.0.3.10	west.contoso.local

The contoso.local zone contains zone delegations for east.contoso.local and west.contoso.local. All the DNS servers use root hints. You need to ensure that all the DNS servers can resolve the names of all the internal namespaces and internet hosts.

Solution: On Server2 and Server3, you configure a conditional forwarder for contoso.local. Does this meet the goal?

A. Yes

B. No

Correct Answer: B
