### QUESTION 1

You have a server that runs Windows Server and contains a shared folder named UserData. You need to limit the amount of storage space that each user can consume in UserData. What should you use?

- A. Storage Spaces
- B. Work Folders
- C. Distributed File System (DFS) Namespaces
- D. File Server Resource Manager (FSRM)

Correct Answer: D

Reference: <https://docs.microsoft.com/en-us/windows-server/storage/fsrm/fsrm-overview>

### QUESTION 2

HOTSPOT

Which groups can you add to Group3 and Group5? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Group3:

Group6 only
Group1 and Group2 only
Group1 and Group4 only
Group1, Group2, Group4, and Group5 only
Group1, Group2, Group4, Groups, and Group6

Group5:

Group1 only
Group4 only
Group6 only
Group2 and Group4 only
Group4 and Group6 only

Correct Answer:

Group3:

Group6 only
Group1 and Group2 only
Group1 and Group4 only
Group1, Group2, Group4, and Group5 only
Group1, Group2, Group4, Groups, and Group6

Group5:

Group1 only
Group4 only
Group6 only
Group2 and Group4 only
Group4 and Group6 only

Group 3 = Group 1, 2 4 and 5 only. Domain-Local groups can contain members from the "forest".

Group 5 = Group 4 only. Global groups can only contain Users, Computers and Global groups from the "same" domain.

### QUESTION 3

What should you implement for the deployment of DC3?

- A. Azure Active Directory Domain Services (Azure AD DS).
- B. Azure AD Application Proxy.
- C. An Azure virtual machine.
- D. An Azure AD administrative unit.

Correct Answer: C

Create a domain controller named dc3.corp.fabrikam.com in Vnet1.

In a hybrid network, you can configure Azure virtual machines as domain controllers. The domain controllers in Azure communicate with the on-premises domain controllers in the same way that on-premises domain controllers

communicate

with each other.

---

#### QUESTION 4

Your network contains an Active Directory Domain Services (AD DS) forest named contoso.com. The forest root domain contains a server named server1.contoso.com.

A two-way forest trust exists between the contoso.com forest and an AD DS forest named fabrikam.com. The fabrikam.com forest contains 10 child domains.

You need to ensure that only the members of a group named fabrikam\Group1 can authenticate to server1.contoso.com.

What should you do first?

- A. Add fabrikam\Group1 to the local Users group on server1.contoso.com.
- B. Enable SID filtering for the trust.
- C. Enable Selective authentication for the trust.
- D. Change the trust to a one-way external trust.

Correct Answer: C

Selective authentication restricts access over an external or forest trust to only those users in a trusted domain or forest who have been explicitly given authentication permissions to computer objects (resource computers) residing in the trusting domain or forest. This authentication setting must be manually enabled.

Note: When a two way Forest Trust is created between Forest A and Forest B, all domains in Forest A will trust all domains in Forest B and vice versa.

Incorrect:

Not B: When SID Filtering is enabled, all the foreign SIDs will be removed (quarantined) from user's access token while accessing any resource through Forest Trust. The most common impact of this is, a migrated user account which is still

using any resource using old SID will not be able to access that resource anymore. This is because when SID Filtering is enabled, it will block (filter) SID History through a Forest Trust.

When we create a forest Trust, SID Filtering is enabled by default. In some cases, we need to disable SID Filtering.

Not D: When a two way Forest Trust is created between Forest A and Forest B, all domains in Forest A will trust all domains in Forest B and vice versa.

If a one way Forest Trust is created, where Forest A is Trusting Domain and Forest B is Trusted Domain, then Forest B can access resources within Forest A, however Forest A cannot access resources within Forest B.

### QUESTION 5

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory Domain Services (AD DS) domain named contoso.com.

You need to identify which server is the PDC emulator for the domain.

Solution: from Active Directory Users and Computers, you right-click contoso.com in the console tree, and then select Operations Master

Does this meet the goal?

A. Yes

B. No

Correct Answer: A

As xrisimix said; Operation Masters and then PDC tab
