QUESTION 1

HOTSPOT

You have a server named Server1 that runs Windows Server.

On Server1, you create a Data Collector Set named CollectorSet1 based on the Basic template.

You need to configure CollectorSet1 to meet the following requirements:

Older performance counter logs must be overwritten by new ones.

Performance counter logging must stop if there is less than 500 MB of free disk space.

What should you configure for each requirement? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Older performance counter logs must be
overwritten by new ones:

The Configuration properties
The Data Manager properties
The Performance Counter properties

Performance counter logging must stop if there
is less than 500 MB of free disk space:

The Configuration properties
The Data Manager properties
The Performance Counter properties

Correct Answer:

Answer Area

Older performance counter logs must be
overwritten by new ones:

The Configuration properties
The Data Manager properties
The Performance Counter properties

Performance counter logging must stop if there
is less than 500 MB of free disk space:

The Configuration properties
The Data Manager properties
The Performance Counter properties

QUESTION 2

You have two file servers named Server1 and Server2 that run Windows Server. Server1 contains a shared folder named Data. Data contains 10 TB of data.

You plan to decommission Server1.

You need to migrate the files from Data to a new shared folder on Server2. The solution must meet the following requirements:

Ensure that share, file, and folder permissions are copied. After the initial copy occurs, ensure that changes in \\Server1\Data can be synced to the destination without initiating a full copy.

Minimize administrative effort.

What should you use?

A. xcopy

B. Storage Replica

C. Storage Migration Service

D. azcopy

Correct Answer: C

Reference:

https://docs.microsoft.com/en-us/windows-server/storage/storage-migration- service/overview#why-use-storage-migration-service

QUESTION 3

You are remediating the firewall security risks to meet the security requirements. What should you configure to reduce the risks?

A. a Group Policy Object (GPO)

B. adaptive network hardening in Microsoft Defender for Cloud

C. a network security group (NSG) in Sub1

D. an Azure Firewall policy

Correct Answer: A

Explanation:

Firewall rules configured in a Group Policy Object cannot be modified by local server administrators.

Reference:

https://docs.microsoft.com/en-us/windows/security/threat-protection/windows-firewall/create-an-inbound-port-rule

QUESTION 4

You deploy Azure Migrate to an on-premises network.

You have an on-premises physical server named Server1 that runs Windows Server and has the following configuration.

*

 Operating system disk 600 GB

*

 Data disic 3 TB

*

 NIC Teaming: Enabled

*

 Mobility service: installed

*

 Windows Firewall: Enabled

*

 Microsoft Defender Antivirus: Enabled

You need to ensure that you can use Azure Migrate to migrate Server1.

Solution: You disable NIC Teaming on Server1.

Does this meet the goal?

A.

Yes

B.

No

Correct Answer: B

QUESTION 5

HOTSPOT

You have two servers that have the Web Server (IIS) server role installed. The servers are configured as shown in the following table.

Name	Operating system
Server1	Windows Server 2016
Server2	Windows Server 2022

Both servers are configured to enable website deployment by using the Web Deployment Tool. Server1 hosts a website named Site1 that has Web Deploy Publishing configured.
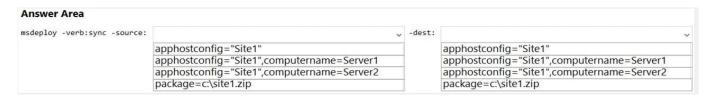

You plan to migrate Site1 to Server2.

You need to perform a pull synchronization of Site1 by using the Web Deployment Agent Service.

How should you complete the command? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

```
msdeploy -verb:sync -source: [                                      ▼ ] -dest: [                              ▼ ]
                             apphostconfig="Site1"                          apphostconfig="Site1"
                             apphostconfig="Site1",computername=Server1     apphostconfig="Site1",computername=Server1
                             apphostconfig="Site1",computername=Server2     apphostconfig="Site1",computername=Server2
                             package=c:\site1.zip                           package=c:\site1.zip
```

Correct Answer:

Answer Area

```
msdeploy -verb:sync -source: [                                      ▼ ] -dest: [                              ▼ ]
                             apphostconfig="Site1"                          apphostconfig="Site1"
                             apphostconfig="Site1",computername=Server1     apphostconfig="Site1",computername=Server1
                             apphostconfig="Site1",computername=Server2     apphostconfig="Site1",computername=Server2
                             package=c:\site1.zip                           package=c:\site1.zip
```
