QUESTION 1

DRAG DROP

Match the Azure storage services to the appropriate descriptions.

To answer, drag the appropriate storage service from the column on the left to its description on the right. Each service may be used once, more than once, or not at all.

Select and Place:

Storage service

- Azure Blob storage
- Azure Disk Storage
- Azure Files
- Azure Queue Storage

Answer Area

- Used for reliable messaging between applications
- Can be accessed as a network share from a Windows device
- Can be configured to use the Archive access tier

Correct Answer:

Storage service

-
- Azure Disk Storage
-
-

Answer Area

- Azure Queue Storage | Used for reliable messaging between applications
- Azure Files | Can be accessed as a network share from a Windows device
- Azure Blob storage | Can be configured to use the Archive access tier

QUESTION 2

HOTSPOT

To complete the sentence, select the appropriate option in the answer area.

Hot Area:

Your Azure trial account expired last week.

You are now unable to

	▼
Create additional Azure Active Directory (Azure AD) user accounts	
start an existing Azure virtual machine	
access your data stored in Azure	
access the Azure portal	

Correct Answer:

Your Azure trial account expired last week.

You are now unable to

	▼
Create additional Azure Active Directory (Azure AD) user accounts	
start an existing Azure virtual machine	
access your data stored in Azure	
access the Azure portal	

A stopped (deallocated) VM is offline and not mounted on an Azure host server. Starting a VM mounts the VM on a host server before the VM starts. As soon as the VM is mounted, it becomes chargeable. For this reason, you are unable to start a VM after a trial has expired.

Incorrect Answers:

1.

You are not charged for Azure Active Directory user accounts so you can continue to create accounts.

2.

You can access data that is already stored in Azure.

3.

You can access the Azure Portal. You can also reactivate and upgrade the expired subscription in the portal.

QUESTION 3

Note: The question is included in a number of questions that depicts the identical set-up. However, every question has a

distinctive result. Establish if the solution satisfies the requirements.

A company that has numerous divisions is planning to deploy an Azure environment.

The company would like each division's option to pay for the Azure services it utilizes, not be the same.

You have been asked to recommend a solution to meet the requirements.

Solution: You recommend that an Azure role be created for each division.

Does the solution meet the goal?

A. Yes

B. No

Correct Answer: B

QUESTION 4

In the infrastructure as a service (IaaS) cloud service model, which two components are the responsibility of the cloud service provider? Each correct answer presents a complete solution. NOTE: Each correct selection is worth one point.

A. the configuration and maintenance of storage

B. the installation and configuration of the operating system

C. maintaining the hardware

D. the network configuration

E. physical security of the datacenter infrastructure

Correct Answer: CE

Infrastructure as a service (IaaS) is a type of cloud computing service that offers essential compute, storage, and networking resources on demand, on a pay-as-you-go basis. IaaS is one of the four types of cloud services, along with software as a service (SaaS), platform as a service (PaaS), and serverless.

Migrating your organization's infrastructure to an IaaS solution helps you reduce maintenance of on-premises data centers, save money on hardware costs, and gain real-time business insights. IaaS solutions give you the flexibility to scale your IT resources up and down with demand. They also help you quickly provision new applications and increase the reliability of your underlying infrastructure.

IaaS lets you bypass the cost and complexity of buying and managing physical servers and datacenter infrastructure. Each resource is offered as a separate service component, and you only pay for a particular resource for as long as you need it. A cloud computing service provider like Azure manages the infrastructure, while you purchase, install, configure, and manage your own software - including operating systems, middleware, and applications.

QUESTION 5

This question requires that you evaluate the underlined text to determine if it is correct.

You plan to deploy 20 virtual machines to an Azure environment. To ensure that a virtual machine named VM1 cannot connect to the other virtual machines, VM1 must be deployed to a separate virtual network.

Instructions: Review the underlined text. If it makes the statement correct, select "No change is needed". If the statement is incorrect, select the answer choice that makes the statement correct.

- A. No change is needed
- B. run a different operating system than the other virtual machines
- C. be deployed to a separate resource group
- D. have two network interfaces

Correct Answer: A

Azure automatically routes traffic between subnets in a virtual network. Therefore, all virtual machines in a virtual network can connect to the other virtual machines in the same virtual network. Even if the virtual machines are on separate subnets within the virtual network, they can still communicate with each other.

To ensure that a virtual machine cannot connect to the other virtual machines, the virtual machine must be deployed to a separate virtual network.
