QUESTION 1

An integration cartridge implements communication between the B2C Commerce Storefront and a third-party service provider. The cartridge contains the localServiceRegistry code:

```
var LocalServiceRegistry = require('dw/svc/LocalServiceRegistry');
module.exports = LocalServiceRegistry.createService('serviceprovider.rest.auth',
    {
        createRequest: function(svc) {
            var svcCredential = svc.getConfiguration().credential;
            if (empty(svcCredential.user) || empty(svcCredential.password)) {
                throw new Error('Basic Auth requires valid client ID (user) and secret (password)');
            }
            var requestBody = {
                clientId: svcCredential.user,
                clientSecret: svcCredential.password
            };
            svc.setAuthentication('NONE');
            svc.addHeader('Accept', 'application/json');

            return JSON.stringify(requestBody);
        },
        parseResponse: function(svc, httpClient) {
            return httpClient.text;
        }
    }
);
```

How does this code sample accomplish authentication to the service provider?

- A. By Issuing a Basic Auth request to the service provider.
- B. By performing a signed SOAP Auth request using a certificate.
- C. By wrapping the authentication service call with Basic Auth.
- D. By disabling Basic Auth and executing the service authentication call.

Correct Answer: D

QUESTION 2

A company that is a shoe-producer is doing Salesforce B2C Commerce implementation. In their Enterprise Resource Planning (ERP) system, the products are marked as being one of three types: boots, sandals, and sneakers. The business requirements based on the type are:

1.

The messaging on Product Detail page is different

2.

Customers are able to filter their Product Search Results

The customer's operations team asks about the format in which to send this value in the catalog.

Which data type should the Architect specify for this attribute in the Data Mapping document?

- A. A custom attribute of type string containing comma separated values.
- B. A custom attribute type set-of-string containing multiple values.
- C. A custom attribute of type enum-of-string (multiselectable value).
- D. A custom attribute of type enum-of-string (single selectable value)

Correct Answer: D

QUESTION 3

The development team is building a complex LINK cartridge for a hosted checkout solution. The provider's database is used as a single source of truth, but the information in the Basket on B2C Commerce side needs to be synchronized. This

is implemented asynchronously the back end when the customers interact with the hosted checkout page and change their shipping/bidding details.

As an Architect you have to advise the development team with how to implement the logging to ensure that there will be a mechanism available to allow troubleshooting in the case something goes wrong on production.

Which solution should the Architect suggest?

- A. Report info level message for the back-end asynchronous communication between both systems. Report all errors at error level message.
- B. Report debug level message for the back-end asynchronous communication between both systems. Report all errors at error-level message.
- C. Get logger for cartridge specific category. Report debug level message for the back end asynchronous communication between both systems. Report all errors at error level message.
- D. Get logger for cartridge-specific category. Report Info level message for the back-end asynchronous communication between both systems. Report all errors at error level message.

Correct Answer: D

QUESTION 4

The Architect has been presented with a requirement from the business to implement a new LINK cartridge. The current site is built on the Storefront Reference Architecture, and the LINK cartridge is certified for Pipelines and Controllers. On review, the Architect notes that the Jobs are all created in Pipelines.

How should the Architect implement that cartridge to make sure the required jobs run properly?

- A. The Job Pipelines must be updated to use SiteGenesis Controllers.
- B. The job Pipelines must be removed and recreated with scripts.
- C. The job Pipelines must be updated to use SFRA Controllers.
- D. The job Pipelines must be updated to work as custom job steps.

Correct Answer: D

QUESTION 5

An ecommerce site has dynamic shipping cost calculation. it allows the customers to see their potential shipping costs on the Product Detail Page before adding an item to the cart. For this feature, shipping costs are calculated using the following logic:

1.

Set the shipping method on the Basket

2.

Add the item to the basket, calculate the basket total and get the shipping cost for this method

3.

Remove the item from the Basket to restore the original state

4.

The above process is repeated for each shipping method

During the testing it was discovered that the above code violates the `spi.basket.addResolveInSameRequest` quota.

What should the Architect do to resolve this issue and maintain the business requirement?

- A. Omit the removal of the Item and speed up the process for the customer by adding the product to the basket for them.
- B. Omit the calculation of shipping cost until the customer is ready to check out and has chosen the shipping method they want to
- C. Wrap each Individual step of the process its own transaction Instead of using one transaction for all steps.
- D. Wrap the adding of product and shipping cost calculation in a transaction which is then rolled back to restore the original state

Correct Answer: B
