Correct Answer: B

**QUESTION 2**

When would this pattern be used?

1. Video plays and audio is analyzed    2. Audio is transcribed    3. Concepts are gathered    4. Concepts are ranked based on confidence    5. Recommendations are given based on top concepts

A. When there is a need to disambiguate the output of a dialog

B. When there is a need to analyze or index content contained within an image

C. When there is a need to analyze or index content contained within speech

D. When there is a need to search through output from Natural Language Classifier

Correct Answer: C

**QUESTION 3**

What combination of these Watson AI capabilities are applicable for an email-based, help desk?

A. structured data analytics

B. image classification

C. keyword extraction

D. speech recognition

E. text classification

F. entity extraction

Correct Answer: CE

---

QUESTION 4

How does a developer obtain all of the information needed to connect to an IBM Watson AI service?

A. All needed information is published in the service\\'s online reference

B. From the service instance, using the IBM Cloud GUI or the Command Line Interface (CLI), or programmatically using IBM Cloud environment variables

C. Programmatically using the IBM Cloud registry

D. Connection information is found in the IBM Cloud dashboard

Correct Answer: A

---

QUESTION 5

An AI solution is implemented to detect what the user wants to do. The user mentions that he wants to buy a ski jacket for an upcoming vacation in Colorado?

How could IBM Watson Natural Language Classifier (NLC) be used in the solution?

A. Profile properties configured for NLC could direct selection of intent

B. A location intent could be trained to assess the relevant attitude for the desired product

C. The phase entered by the user is passed to a classifier to provide a class that indicates the user\\'s intent

D. A new classifier could point to the correct answer to each question

Correct Answer: B
