QUESTION 1

IBM BPM offers which read-only system variable to access the information stored about an exception that occurred in an instance of a service?

A. tw.object.Error

B. tw.system.error

C. tw.object.XMLElement

D. tw.system.step.error

Correct Answer: D

QUESTION 2

A shared object is passed by reference from a process to two different services. The process and services

each contain a separate copy of the business object. When the first service completes, the shared object

values are automatically persisted to the data store.

Which statement is true regarding the second service?

A. When the second service starts, the shared object values are automatically loaded from the data store.

B. When the second service starts, the shared object values still refers to the copy of the business object it received from the process.

C. When the second service starts, the shared object values have to be manually loaded from the data store.

D. When the second service starts, the shared object values is passed by the process again.

Correct Answer: D

QUESTION 3

In IBM BPM, what needs to be done to use an external service in a Service Flow?

A. Use a Modify Task activity type to invoke an operation of the external service

B. Use a Service Task activity type to invoke an operation of the external service

C. Use a Decision activity type to invoke the rules of an external service

D. Use a Content Integration Task activity type to invoke an operation of the external service

Correct Answer: C

QUESTION 4

What will happen when sequence flows evaluate to false in an inclusive gateway?

A. The instance will never complete.

B. The default sequence flow will be followed.

C. A failed event will be created for the process instance.

D. The gateway will wait for one of the sequence flows to become true.

Correct Answer: B

QUESTION 5

Administrators in a hospital use a web-based application when filling out new patient forms. They experience frequent web browser freezes or it becomes unresponsive for several seconds. This is due to large content of data with numerous sections and tables presented in a single page patient form. As part of refactoring the application, the BPM application developer is tasked to mitigate the performance impact of the new patient form page. What guidelines can the developer follow to improve the performance?

A. Add exit safeguard, collapsible panel in deferred section control, and add modal section with panel

B. Add tab section, change the rendering option of one or more table columns to seamless coach view, and add progress bar with navigation event

C. Contain coach views with in responsive sensor, add modal section, and change the rendering option of one or more table columns to simple html

D. Server side pagination of table data, contain complex coach view in a deferred section control, and enable async loading in horizontal/vertical layouts

Correct Answer: D
