QUESTION 1

IBM Analytics Engine is based on what open source package?

- A. Hortonworks Data Science
- B. Hortonworks Data Platform
- C. Hortonworks Predictive Analytics
- D. Hortonworks for Global Data Management

Correct Answer: B

QUESTION 2

Which analytics service, available from the IBM Cloud catalog, provides a means for writing and running custom queries against files in Cloud Object Storage, without the need to create a database?

- A. Streaming Analytics
- B. Decision Optimization
- C. DB2 Warehouse
- D. SQL Query

Correct Answer: A

QUESTION 3

What are two characteristics of cloud applications and services that concern Service Owners?

- A. Performance
- B. Restart
- C. Recovery
- D. Availability
- E. Scalability

Correct Answer: DE

QUESTION 4

What is the role of Data Anonymization in Watson Knowledge Catalog?

- A. It is the process to remove data columns that contain sensitive confidential data, such as PII or restricted business data, while preserving data from the other column that are not confidential or restricted
- B. It is the processing of personal data in such a way that the data can no longer be attributed to a specific data subject without the use of additional information.
- C. It is the process to mask data column that contain sensitive confidential such as PII or restricted business data, using encryption software to provide access keys.
- D. It is the encryption of data prior to transmission across networks.

Correct Answer: C

QUESTION 5

Which are two limitations of the CouchBackup tool?

- A. The database cannot be accessed while the tool is running
- B. Index definitions are backed up by the tool but the content of indexes is not
- C. it does not offer a way to restore backups
- D. It's not possible to embed tool commands into UNIX shell scripts
- E. Attachments are not backed up by the tool

Correct Answer: BE

<https://cloud.ibm.com/docs/services/Cloudant?topic=cloudant-ibm-cloudant-backup-and-recovery>

The CouchBackup tools have the following limitations:

security settings are not backed up by the tools.

Attachments are not backed up by the tools.

Backups are not precisely accurate "point-in-time" snapshots.

The reason is that the documents in the database are retrieved in batches, but other applications might be updating documents at the same time. Therefore, the data in the database can change between the times when the first and last batches are read. Index definitions that are held in design documents are backed up, but the content of indexes is not backed up.

This limitation means that when data is restored, the indexes must be rebuilt.

The rebuilding might take a considerable amount of time, depending on how much data is restored.
