QUESTION 1

Which of the following statements describes Helm?

- A. Helm is an OpenStack package manager that uses Heat templates to define, install, and upgrade complex applications
- B. Helm is an open source project to connect, secure, control, and observe Kubernetes services
- C. Helm is a Kubernetes package manager that uses Helm charts to define, install, and upgrade complex Kubernetes apps in your cluster
- D. Helm is used to describe the network of microservices that make up applications in Kubernetes

Correct Answer: C

Reference: <https://helm.sh/>

QUESTION 2

IBM Cloud Security Advisor Network Insights uses which two KPIs to monitor inbound traffic? (Choose two.)

- A. Reconnaissance by suspicious clients
- B. Suspicious request header format
- C. Abnormally large numbers of failed login attempts
- D. Suspicious client IP address from the black list
- E. Abnormally large payloads sent by suspicious clients

Correct Answer: AC

QUESTION 3

What's the correct architectural network topology in IBM Cloud?

- A. VPC > Zone > Region > Subnet
- B. VPC > Region > Zone > Subnet
- C. Region > VPC > Zone > Subnet
- D. Region > Zone > VPC > Subnet

Correct Answer: D

Reference: <https://cloud.ibm.com/docs/vpc-on-classic?topic=vpc-on-classic-about>

QUESTION 4

A VPC has been created with a single subnet. Virtual server instances have been deployed on the subnet that have different functions which support a production application. The security team has now said that they want to ensure that network traffic between the different server types can be controlled. How can this be achieved?

- A. Use a Hardware Security Module to create advanced network routing tables that ensure traffic does not route between server types, as per the security team's wishes
- B. Create security groups for the different server types with inbound and outbound rules that satisfy the security team, into which the VSIs can be placed
- C. Create a VPC load balancer and place each server type into its own back-end pool, then create Layer7 routing policies that restrict network traffic flowing between the different pools
- D. Create multiple access control lists with rules that satisfy the security team's requirements and associate each VSI to the respective ACL

Correct Answer: A

QUESTION 5

What is IBM Cloud Functions?

- A. A polyglot functions-as-a-service (FaaS) programming platform for lightweight code that executes on demand
- B. A capability of Cloudant for triggering an action as data is updated, for example, sending data updates to systems
- C. An IBM Cloud service for implementing multi-stage business processes involving users and systems
- D. The low-code/no-code development environment for data replication and systems integration in App Connect

Correct Answer: A
