QUESTION 1

Frank has a portlet that accesses PUMA to retrieve some details about a user to control what is displayed in his custom portlet (user categories). After some analysis, he sees that performance is poor and feels that this issue is because of PUMA. Frank would like to store some of the PUMA objects in the session.

Which PUMA object can be stored safely in the session?

- A. PumaHome
- B. PumaLocator
- C. PumaProfile
- D. PumaController

Correct Answer: A

: PumaProfile Contains methods that provide read-only access to the User and Group attributes and identifiers. You can use this interface to get the User object for the current user. PumaLocator Contains methods for looking up User and Group objects. You can use this interface to obtain a List of Group objects for all of the groups in which the current user is a member. Beginning with Version 7.0 of WebSphere?Portal, paging is supported. Which means that the result set is split up into subsets (pages) and a special iterator can be used to access the pages. PumaController Contains methods for creating and deleting Users and Groups and for modifying the User and Group profiles and membership. PumaEnvironment Contains methods to retrieve virtual principals, access general properties for user management, and a method to bypass access control for the user and group management layer. Before the portlet can use these provider objects, it must first retrieve the appropriate home interface, depending on the type of application. Standard portlet com.ibm.portal.um.portletservice.PumaHome

QUESTION 2

Which folders are two of the root folders in the fs-type1 WebDAV entry point? (Choose two.)

- A. skins
- B. layout
- C. resources
- D. layout-templates
- E. theme-templates

Correct Answer: AD

older structure and reserved folder names The fs-type1 WebDAV entry points provide the following set of predefined root folders used by themes: themes skins layout-templates common-resources iwidgets

QUESTION 3

Which two options are valid uses of the XML Configuration interface? (Choose two.)

- A. Install a portlet.
- B. Clone a skin module.
- C. Delete a shared library.
- D. Back up an IBM WebSphere Portal server configuration.
- E. Export all property files from a WebSphere Portal server.

Correct Answer: DE

QUESTION 4

Hannah is configuring a new menu feed and does not want the feed to be formatted in XML. Which language can be used instead?

- A. RSS
- B. JSON
- C. HTML
- D. SGML

Correct Answer: A

RSS is a format for syndicating news and the content of news-like sites, including major news sites like Wired, news-oriented community sites like Slashdot, and personal weblogs. But it's not just for news.

Pretty much anything that can be broken down into discrete items can be syndicated via RSS:

the "recent changes" page of a wiki, a changelog of CVS checkins, even the revision history of a book.

Once information about each item is in RSS format, an RSS-aware program can check the feed for changes and react to the changes in an appropriate way.

QUESTION 5

Sally developed a custom theme module that requires Dojo to render it. In the custom module definition, she added the Dojo modules to the prerequisite list. Sally then added her custom module to the non-deferred section of the Deferred (Default) profile, leaving the Dojo modules in the deferred section.

What is the result of rendering a page in view mode with the Deferred (Default) profile assigned?

- A. The custom module is not run.
- B. The Dojo modules are promoted to non-deferred.
- C. A JavaScript error occurs, indicating that Dojo is undefined.
- D. A server-side error occurs, indicating that the Dojo modules are deferred.
