-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

QUESTION 1

What restrictions must the application developer keep in mind when building the command-based invalidation policies in `incachespec.xml`?

- A. The only methods that can be used in the method component, are those invoked by the command that returns the input instance variables
- B. All the cache IDs must match either the dependency IDs or component IDs
- C. All the invalidation IDs must match either the dependency IDs or component IDs
- D. The request attributes component type must be used

Correct Answer: C

QUESTION 2

In order to unit test a new IBM WebSphere Commerce service module, a UnitTest project is created during code generation. Inside the UnitTest project, there are JUnit tests to create the multiple messages required to test the functionality. Which authentication mechanism can be used to most quickly create a user identity such that the service specified can be invoked using that identity?

- A. Plain(cleartext)
- B. LDAP
- C. Callback Handler
- D. Kerberos

Correct Answer: B

QUESTION 3

To support the "buy one get one free" functionality, when a consumer adds an item to the shopping cart, another applicable item should be added automatically. The customer has an external service that they intend to use to determine the applicable item.

How can this feature be implemented and made available via REST Service in IBM WebSphere Commerce V7 FEP 7, with minimum customization?

- A. Extend `OrderItemAddCmd/OrderCalculateCmd` to call the external service. The extension will automatically be invoked when the `CartHandler` service is used.
- B. "Buy one get one free" is a supported type of promotion, it can be created and managed using the Promotions tool in IBM Management Center for WebSphere Commerce. The feature is available in the out of the box `CartHandler` service.

C. Implement a ResourceHandler which invokes a custom entity bean. The custom entity bean calls external service and updates the PX_PROMOTION table. OrderItemAddCmd will automatically process the table and add the free item accordingly.

D. Extend the out of the box OrderHandler, which invokes processOrChangeOrder() in OrderHelper: update ChangeOrderSOIBODMapping.xml configuration with custom implementation of OrderItemAddCmd/OrderCalculateCmd to call external service and add the free item accordingly.

Correct Answer: C

QUESTION 4

Which two persistence mechanisms are currently used in IBM WebSphere Commerce?

- A. TopLink
- B. Enterprise JavaBeans
- C. Data Services Layer
- D. Hibernate
- E. Castor

Correct Answer: BD

QUESTION 5

A company with a multilingual website wants to extend the product display page to display some proprietary information. This proprietary information can either be in the form of a string or a number. What is the most efficient way to store and display this new information?

- A. Save this information in the provided custom fields in CATENTDESC (e.g field 1, field2, etc) and reuse the existing access/data bean
- B. Save the information in an extended CATENTDESC table, create a sub-noun in the OOB CatalogEntry noun and then use DSL to access the new data
- C. Save the information in an extended CATENTRY table, create a sub-noun in the OOB CatalogEntry noun and then use DSL to access the new data
- D. Save this information in the provided custom fields in CATENTRY (e.g field 1, field2, etc) and reuse the existing access/data bean

Correct Answer: C
