"A non-unique name was specified where a unique name is required. Column names must be uniquewithin an index, a table, or a view, and in the UPDATE OF clause of a trigger definition."

What is the most likely cause of this issue, and how should it be rectified?

B. The -612 error code indicates that configureDatabaseFixpack.xml contains duplicate corrupt entries. The developer will need to re-run the Fix Pack upgrade before they can re-run the updateDB script.

C. The -612 error code indicates that the database changes have been committed via configureDatabaseFixpack.xml to a duplicate GEONODE table. The developer will need to delete the duplicate table and re-run the updateDB script.
