Which of the following describes the benefits of Cognos Application Firewall (CAF)?

- A. It protects the application by monitoring all HTTP requests sent through the Web server to ensure the gateway is receiving valid requests.
- B. It allows Cognos BI to run over the Internet.
- C. It monitors and validates all input requests to prevent parameter manipulation, SQL injection, and buffer overflow.
- D. It encrypts all input requests for validation before they are sent to the dispatcher.

Correct Answer: C

---

#### QUESTION 5

Which of the following is correct regarding the processing of a PageDown high affinity request?

- A. The request is routed to the same process that served up the originating low affinity request if the process is available and if there is an available high affinity connection.
- B. The request is given priority and is always processed by the same process that served up the originating low affinity request.
- C. The request is load-balanced and is sent to any available dispatcher in the system.
- D. The request is automatically queued and is processed by the first available low affinity connection in the system.

Correct Answer: A
