QUESTION 1

A developer has specified a maximum of two report processes for the application. While monitoring the application, the developer notices that only one report process is running.

Which of the following would account for this?

- A. The number of affinity connections per BI Bus is set too high.
- B. The configuration size for the application is set too low.
- C. The number of low affinity connections has been exceeded.
- D. The number of report requests is too high.

Correct Answer: A

QUESTION 2

Companies often create a collection of summary tables as their first attempt at a data warehouse. While there are several drawbacks to this approach, there are also some advantages.

Which of the following is an advantage of this approach over reporting from an operational database?

- A. It is easier to understand because there are fewer summary tables.
- B. Specific reports for which the summary tables were created will run faster.
- C. It is easy to leverage many new reports from the summary tables.
- D. Over time summary tables often naturally group into business subject areas.

Correct Answer: B

QUESTION 3

Which combination of Cognos 8 components is considered the BEST fit for addressing the needs of company executives?

- A. Analysis Studio reports and Query Studio
- B. Metric Studio scorecards and Event Studio jobs
- C. Report Studio reports and Query Studio
- D. Metric Studio scorecards and Report Studio dashboards

Correct Answer: D

QUESTION 4

Which of the following statements is true about the Waterfall Approach?

- A. The five steps in the process are considered valid for BI software development projects.
- B. Each step is performed in sequence but you return to previous steps at specific points in the development cycle.
- C. It is designed so that requirements that are not discovered in the Analysis step will cascade out during the design phase.
- D. Project management tools no longer encourage the Waterfall Approach.

Correct Answer: A

QUESTION 5

Why should an application's performance be monitored on an ongoing basis after it goes into production?

- A. Initial performance tests are usually too optimistic.
- B. There is little value in performance tests before a system goes into production.
- C. Usage patterns on applications tend to change over time.
- D. New releases of system and application software usually degrade performance.

Correct Answer: C
