### QUESTION 1

An Administrator has configured a customized log source extension to provide asset updates to IBM Security QRadar SIEM V7.2.8. Instead of QRadar receiving an update that has the host name of the asset that the user logged in to, the log source generates many asset updates that all have the same host name. In this situation what will QRadar report?

- A. This will cause stale asset data.
- B. This will cause asset growth deviations.
- C. This will cause excessive authentication failure events.
- D. This will cause excessive flow data to be processed by the Magistrate.

Correct Answer: B

Instead of QRadar receiving an update that has the host name of the asset that the user logged in to, the log source generates many asset updates that all have the same host name.

In this situation, the asset growth deviation is caused by one asset profile that contains many IP addresses and user names.
