QUESTION 1

Which two tasks belong to the daily server maintenance procedure?

- A. register node
- B. activate policy
- C. expire inventory
- D. back up database
- E. identify duplicates

Correct Answer: CD

Explanation: Daily schedule of Tivoli Storage Manager operations The image shows the timeline for the daily schedule: Client backups run from approximately 10 PM to 6 AM. Storage pool backup runs from approximately 6 AM to 10 AM. Database backup and the creation of disaster recovery copies of the volume history and device configuration files runs from 10 AM to 12 PM. Migration runs from approximately 12 PM to 2 PM. Expiration runs from 2 PM to 4 PM. Reclamation runs from 4 PM to 8 PM. Disaster recovery preparations run from 8 PM to 10 PM.

QUESTION 2

Which level of IBM Tivoli Storage Manager administrator authority includes the ability to restore node data from a remote system to a local system?

- A. storage
- B. system
- C. operator
- D. client access

Correct Answer: C

Explanation: The Backup Operators group allows users to back up and restore files regardless of whether they have read or write access to the files. Since this group has a limited set of user rights, some functions are not available to members of the Backup Operators group.

QUESTION 3

What is the result when the migrate process moves data from a deduplicated pool to a non-deduplicated pool?

- A. The migration process fails.
- B. The target pool is marked as deduplicated.
- C. The data is reconstituted on the target pool.
- D. The data in both storage pools is reconstituted.

Correct Answer: B

Explanation: * Data deduplication in Tivoli Storage Manager is a two-phase process. In the first phase, the server identifies the duplicate data in the storage pool. As volumes in the storage pool are filled, data becomes eligible for duplicate identification. A volume does not have to be full before duplicate identification starts. In the second phase, duplicate data is removed by any of the following processes:

Reclaiming volumes in the primary-storage pool, copy-storage pool, or active-data pool
Backing up a primary-storage pool to a copy-storage pool that is also set up for deduplication
Copying active data in the primary-storage pool to an active-data pool that is also set up for deduplication
Migrating data from the primary-storage pool to another primary-storage pool that is also set up for deduplication
Moving data from the primary-storage pool to a different primary-storage pool that is also set up for deduplication, moving data within the same copy-storage pool, or moving data within the same active-data pool

QUESTION 4

What is compatible with client-side deduplication?

- A. SSL
- B. NDMP
- C. encryption
- D. LAN-free backup

Correct Answer: B

Explanation: When you configure client-side data deduplication, the following requirements must be met:

*

The client and server must be at version 6.2.0 or later.

*

(not D) Client-side deduplication cannot be used in combination with LAN-free backups.

*

(not C) Files that are intended for deduplication must not be encrypted. Encrypted files and files from encrypted file systems cannot be deduplicated.

Etc.

QUESTION 5

Which task or process might be included in a server administrative schedule?

- A. Shred disk
- B. Promote disk
- C. Ingest inventory
- D. Expire inventory

Correct Answer: D
