QUESTION 1

A system administrator needs to install the IBM Installation Manager (IIM) using non- graphical interactive mode. To perform this operation, what should the administrator run?

- A. imcl -c
- B. imcl -s
- C. imcl -install
- D. imcl -updateAll

Correct Answer: A

QUESTION 2

A mixed version and flexible management topology is required for a new application. For ease of administration, the system administrator needs to register a WebSphere V7.0 stand-alone node with a WebSphere V8.0 job manager. What must the administrator do before registering with the job manager?

- A. federate the V7.0 stand-alone node with a V7.0 node agent
- B. federate the V7.0 stand-alone node with a V8.0 node agent
- C. register the V7.0 stand-alone node with a V7.0 administrative agent
- D. register the V7.0 stand-alone node with a V8.0 administrative agent

Correct Answer: C

QUESTION 3

A system administrator must deploy a new application that uses Java 2 security. There are several applications installed in the cell that use application security but not Java 2 security. How can the administrator enable support for Java 2 security without affecting the other applications?

- A. Enable Java 2 security at the cell level and grant permissions only to the new application.
- B. Configure a security domain with Java 2 security enabled for the application server that will host the new application.
- C. Configure a security domain for the other applications in the cell with both Java 2 security enabled and application security.
- D. Disable global security and configure a security domain with Java 2 security enabled for the application server that will host the new application.

Correct Answer: B

QUESTION 4

A system administrator needs to modify the Java 2 security permissions for applications running on a server. How should the administrator perform this task?

- A. Use the PolicyTool.
- B. Use the iKeyman tool.
- C. Edit the was.policy file.
- D. Edit the security.xml file.

Correct Answer: A

QUESTION 5

A system administrator needs to remove all of the application scoped resources from an EAR file. Before installing this application, the administrator should:

- A. set the metadata-complete flag to true.
- B. remove all of the com.ibm* classes.
- C. remove the WEB-INF/ibmconfig folder and all its contents.
- D. remove the META-INF/ibmconfig folder and all its contents.

Correct Answer: D
