QUESTION 1

A remote host machine has been registered to a job manager as a target, and the IBM Installation Manager has been installed on the host. How can an administrator install WebSphere Application Server Network Deployment V8.0 on the remote host?

- A. Use the job manager to schedule a "Manage offerings" job.
- B. Schedule a "Distribute file" job to push the installation response file to the remote host.
- C. Schedule a "Start application" job to launch the IBM Installation Manager on the remote host.
- D. Use the Installation Factory to create a Centralized Installation Manager (CIM) repository on the remote host.

Correct Answer: A

QUESTION 2

A system administrator needs to modify the Java 2 security permissions for applications running on a server. How should the administrator perform this task?

- A. Use the PolicyTool.
- B. Use the iKeyman tool.
- C. Edit the was.policy file.
- D. Edit the security.xml file.

Correct Answer: A

QUESTION 3

A system administrator must deploy a new application that uses Java 2 security. There are several applications installed in the cell that use application security but not Java 2 security. How can the administrator enable support for Java 2 security without affecting the other applications?

- A. Enable Java 2 security at the cell level and grant permissions only to the new application.
- B. Configure a security domain with Java 2 security enabled for the application server that will host the new application.
- C. Configure a security domain for the other applications in the cell with both Java 2 security enabled and application security.
- D. Disable global security and configure a security domain with Java 2 security enabled for the application server that will host the new application.

Correct Answer: B

QUESTION 4

A system administrator needs to monitor a transaction and determine how much time it spends in the web container, EJB container, and backend database. Which tool should the administrator use to gather response times for each component?

- A. Request metrics
- B. Performance servlet
- C. Thread Pool Summary Report
- D. Runtime Performance and Diagnostic Advisor

Correct Answer: A

QUESTION 5

A system administrator configures the intelligent runtime provisioning feature included with WebSphere Application Server Network Deployment V8.0. The default WebSphere settings are in place. At what level will the administrator enable runtime provisioning?

- A. node agent
- B. web container
- C. application server
- D. deployment manager

Correct Answer: C
