QUESTION 1

An administrator installed an enterprise application in fast mode and noticed that the application is failing because J2EE roles have not been mapped.

How can this issue be resolved?

- A. Re-deploy the application.
- B. Request that the application developer create an enhanced .ear file which has roles mapped, and deploy the enhanced .ear file.
- C. Map a security role to the user/group for the application using the Integrated Solutions Console, save changes, and restart the application.
- D. Map a security role to the user runAs roles for the application using the Integrated Solutions Console, save changes, and restart the application.

Correct Answer: C

WSRR defines J2EE roles that must be mapped to user or group principals. This can be done by using the WebSphere Administration Console

QUESTION 2

An administrator has made a configuration change to a server in network deployment topology.

Which statement describes the synchronization process in this scenario?

- A. Configuration changes on a server are prohibited.
- B. Node agent synchronizes its files with the master repository.
- C. Configuration changes are maintained on the node's master repository.
- D. Node agent synchronizes its files with the master repository when the deployment manager is restarted.

Correct Answer: C

QUESTION 3

How can an administrator reduce overhead when utilizing monitored directories?

- A. Increase the polling interval so that the process runs less often.
- B. Decrease the amount of time that the monitored directory is accessible by users.
- C. Decrease the size of the monitored directory so that larger files will not be able to be stored in it.

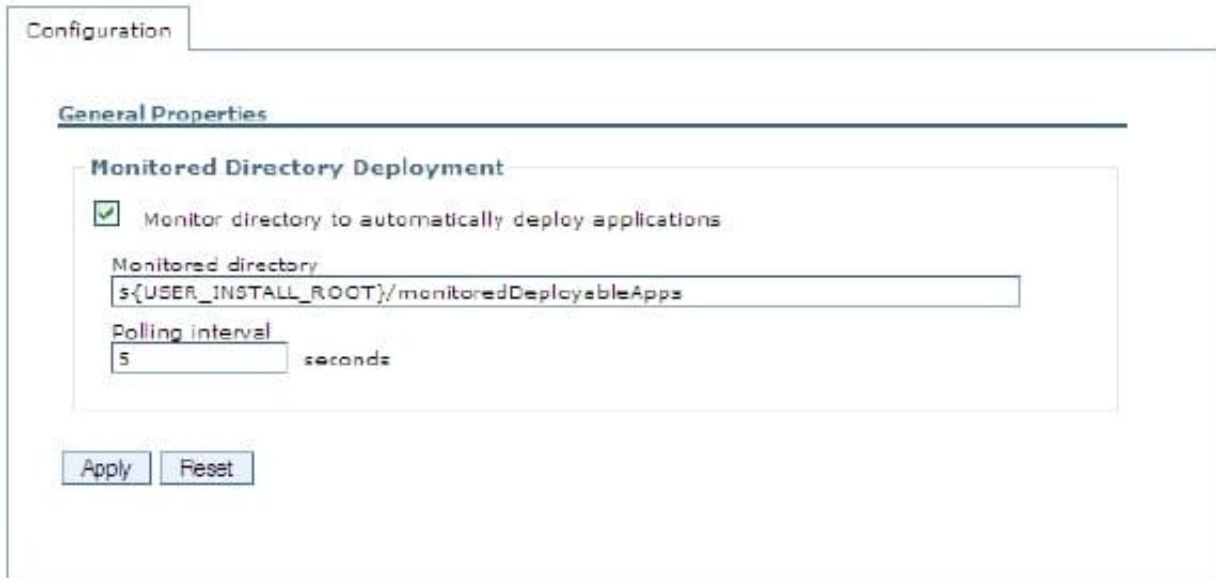

D. Configure the monitored directory settings to not automatically synchronize the application once it is installed.

Correct Answer: A

To change the standard polling interval setting, specify a number of seconds in the Polling interval field.

Figure: Configuring the monitored directory

Reference: Application Server V8.5, July 2013, page 852

QUESTION 4

How can an administrator deploy or update an EAR, JAR, WAR, or SAR file to an application server or cluster in a development environment?

- A. Place the file in the monitored directory.
- B. Place the file in the operating system defined temporary directory.
- C. Place the file in the operating system defined user home directory for the user that owns the Java process.
- D. Email the file to wasadmin@hostname.com, where hostname.com is the host of the IBM WebSphere Application Server.

Correct Answer: A

You can install an enterprise application file on an application server or cluster by dragging or copying an enterprise archive (EAR), web application archive (WAR), Java archive (JAR), or Session Initiation Protocol (SIP) archive (SAR) to a monitored directory.

**QUESTION 5**

A system administrator has downloaded IBM WebSphere Application Server binaries and created a local IBM Installation Manager repository.

What can the system administrator do to ensure only this local Installation Manager repository is used during installation of the product?

- A. Create a preference for the public repository.
- B. Use the Packaging Utility to create the repository.
- C. Make sure the metadata for the repository includes the value "local".
- D. Clear the Search service repositories during installation and update option.

Correct Answer: B
