QUESTION 1

In a data analysis project, a set of sample XML documents are analyzed according to:

- A. business rules.
- B. a validation stylesheet.
- C. the content of the data.
- D. the structure of the schema.

Correct Answer: C

QUESTION 2

A solution developer needs to configure the HTTP listener of an Integration Server on a Linux Server.

Which operating system privilege(s) does the developer need to modify Integration node properties and properties of integration node resources?

- A. mqm
- B. mqm and mqbrks
- C. mqbrks
- D. root user

Correct Answer: D

QUESTION 3

A solution developer is analyzing the of a message flow. There are a number of references defined in the ESQL code of the Compute node.

Why should the developer use dynamic references in the ESQL code of the message flow?

- A. It is a technique to reduce tree copying in a message flow.
- B. It is a technique to reduce tree navigation when accessing repeating elements in a message tree.
- C. References allow the usage of optimized code from dynamically loaded external libraries.
- D. By creating a reference, intermediary results can be cached and so memory usage is reduced.

Correct Answer: B

QUESTION 4

A solution developer is building a solution that integrates with a COBOL application. The COBOL copybook that defines the record layout is available to the solution developer.

What should the developer do to make use of the latest IBM Integration Bus V9.0 features and create a new message model in the least number of steps?

- A. Use the `mqsicreatemsgdefscmd` command to import the COBOL copybook.
- B. Use the DFDL schema editor to define the message model manually using the COBOL copybook as a guide.
- C. Use a wizard to select the COBOL message type, choose the "Create a DFDL schema file by importing a COBOL copybook or program", and then select your copybook to import.
- D. Use a wizard to select the COBOL message type, choose the "Create a MRM message definition by importing a COBOL copybook or program", and then select your copybook to import.

Correct Answer: C

QUESTION 5

A solution developer needs to develop a generic message handler that is common to all applications and message flows. The message handler parses a complex file that contains healthcare records and extracts Patient Eligibility requests. The developer wants to make and deploy changes to the message handler without redeploying all the message flows.

How should the developer define the Integration Bus artifacts?

Define the message handler as:

- A. a subflow in a library and define the message flows as services that reference the library.
- B. a subflow in a library and define the message flows as applications that reference the library.
- C. a subflow in a library and define the message flows as independent resources that reference the library.
- D. an integration service and define the message flows as applications that reference the integration service.

Correct Answer: D
