### QUESTION 1

An integration developer is developing a mediation flow with multiple branches that need to be executed in a specific order. The integration developer plans to use the Flow Order mediation primitive to realize this situation. Which of the following are correct statements for the Flow Order primitive?

- A. A Flow Order primitive has one input terminal and can have any number of output terminals.
- B. A Flow Order primitive must be used at the beginning of a mediation request/response flow.
- C. Each output terminal of a Flow Order primitive is executed with an input message modified by the previous branch.
- D. The properties of a Flow Order primitive can be promoted to be configured at runtime.
- E. The output terminals are executed in the order that they are defined on the primitive, with each branch completing before the next starts.

Correct Answer: AE

---

### QUESTION 2

Which IBM product is an essential part of WebSphere Enterprise Service Bus?

- A. WebSphere MO
- B. WebSphere Process Server
- C. WebSphere Message Broker
- D. WebSphere Application Server

Correct Answer: D

---

### QUESTION 3

An integration developer is tasked with creating a new mediation module for updating records in a customer relationship management system. No back-end or front-end interface has been defined yet.

According to SOA reference architecture, what is the most suitable development approach for the export interface?

- A. Top-down
- B. Bottom-up
- C. End-to-end
- D. Meet-in-the-middle

Correct Answer: B

---

**QUESTION 4**

An integration developer is developing a mediation flow component using dynamic routing capabilities. The integration developer uses an Endpoint Lookup primitive. The match policy selected is "Return first matching endpoint and set routing target". If the registry query returns matches, which of the following represents the behaviour of the Endpoint Lookup primitive?

- A. The alternate targets list in the SMO body is cleared.
- B. The alternate targets list in the SMO header is cleared.
- C. The lookup field in the SMO header is populated with the returned endpoint
- D. The tag in the SMO header is updated with the returned endpoint.

Correct Answer: B

---

**QUESTION 5**

According to SOA principles, which of the following BEST describes the interaction between services?

- A. Services are integrated and mediated by service modules.
- B. Services are integrated and mediated by an enterprise service bus.
- C. Services directly interact with each other through references.
- D. Services intercept and modify messages as they are passed between providers and requesters.

Correct Answer: B
