Following Questions and Answers are all new published by IBM Official Exam Center

QUESTION 1

An integration developer wants to deploy an SCA module as part of an application. The SCA module uses an interface located in a shared library. What must the integration developer do to guarantee the interface is associated with the deployed SCA module at runtime?

A. Declare the shared library in the application\\'s JAR file.

B. Add a dependency on the SCA module in the dependency editor.

C. Add a dependency on the shared library in the dependency editor.

D. Edit the default bindings of the SCA module to declare the dependency.

Correct Answer: C

QUESTION 2

An integration developer is creating a mediation flow component. The integration developer is being asked to enforce a response time requirement in the mediation flow being developed. To do so, which of the following primitives must the integration developer use?

A. SLA Check

B. Endpoint Lookup

C. Policy Resolution

D. Service Policy Check

Correct Answer: A

QUESTION 3

An integration developer wants to persist a property value through the request and response flows. Which of the following context types should the developer choose and where in the flow should it be defined?

A. Correlation context defined in the Input node of the request flow.

B. Correlation context defined in the Message Element Setter primitive of the request flow.

C. Shared context defined in the Input node of the request flow.

D. Shared context defined in the Message Element Setter primitive of the request flow.

Correct Answer: A

QUESTION 4

Interface requirements for a new integration system specify that interfaces must be compliant with Web Services Interoperability (WS-I) standards. Furthermore, some of the interfaces have overloaded operations. Which of the following binding styles is appropriate?

A. Document literal non-wrapped

B. Document literal wrapped

C. Document non-literal

D. Remote Procedure Call (RPC)

Correct Answer: A

QUESTION 5

An integration developer has developed a new mediation flow and wants to test it on a new embedded server profile. How should the integration developer proceed in order to perform this testing as efficiently as possible?

A. Build the EAR file in WebSphere Integration Developer, then deploy it via serviceDeploy on the server.

B. Build the EAR file in WebSphere Integration Developer, then deploy it via the server\\'s administrative console.

C. In WebSphere Integration Developer, in the Servers tab, add a new server and enter the connection details of the server.

D. In WebSphere Integration Developer, import the server via File>Import>Server and enter the connection details of the server.

Correct Answer: C
