QUESTION 1

When deploying a new implementation on-premise, which of the following is recommended when performing custom development?

A. SAP Business Technology Platform

B. SAP Best Practices

C. SAP API Business Hub

D. SAP ABAP Workbench

Correct Answer: D

D is correct because when deploying a new implementation on-premise, it is recommended to use SAP ABAP Workbench for custom development. SAP ABAP Workbench is a tool that allows developers to create, modify, and enhance ABAP programs and applications in an on-premise system. It provides various features, such as syntax check, debugging, testing, and transport management. Verified References:ABAP Workbench

QUESTION 2

Which accelerators support the fit-to-standard workshop in the Explore phase? Note: There are 2 correct answers to this question.

A. Test strategy document

B. Requirements feature in SAP Cloud ALM

C. Quality gate checklist and quality gate guide

D. Business-Driven Configuration questionnaire

Correct Answer: BD

B is correct because the requirements feature in SAP Cloud ALM is an accelerator that supports the fit-to-standard workshop in the Explore phase. It allows the project team to capture and manage the user stories that are identified during the workshop, as well as link them to the relevant scope items and test cases. D is correct because the Business-Driven Configuration questionnaire is an accelerator that supports the fit-to-standard workshop in the Explore phase. It provides a set of questions that help the project team to understand and document the customer\\'s business requirements and configuration settings for each scope item. Verified References: SAP Cloud ALM Business Driven Configuration Questionnaire

QUESTION 3

Which of the following considerations apply when determining the project methodology? Note: There are 3 correct answers to this question.

A. Implementation fit

B. Project Manager fit

C. Organizational fit

D. Project fit

E. Solution fit

Correct Answer: ACD

A is correct because implementation fit is one of the considerations that apply when determining the project methodology. It means that the project methodology should match the type and scope of the implementation, such as cloud, on-

premise, hybrid, or mixed scenarios.

C is correct because organizational fit is one of the considerations that apply when determining the project methodology. It means that the project methodology should suit the culture and maturity of the organization, such as its readiness for

change, agility, and innovation.

D is correct because project fit is one of the considerations that apply when determining the project methodology. It means that the project methodology should align with the characteristics and constraints of the project, such as its size,

complexity, duration, and budget.

QUESTION 4

Which of the following is a key characteristic of the Agile project approach?

A. Frequent quality gates

B. Frequent and detailed project scheduling

C. Formal and detailed documentation

D. Iterative build with frequent inspections

Correct Answer: D

D is correct because Iterative build with frequent inspections is a key characteristic of the Agile project approach. The Agile project approach follows an iterative and incremental development process, where the solution is built and delivered in small increments called sprints. Each sprint consists of planning, designing, building, testing, and reviewing activities, where the team inspects the solution and adapts to changing requirements and feedback

QUESTION 5

Which of the following characteristics relate to the Focused Build for SAP Solution Manager functionality? Note: There are 2 correct answers to this question.

A. SAP delivers all knowledge required with the solution.

B. SAP delivers a standard solution with its own separate license

C. SAP delivers a standard solution without any additional coding required

D. SAP delivers all configuration activities within your project

Correct Answer: AC

A is correct because SAP delivers all knowledge required with the solution as part of the Focused Build for SAP Solution Manager functionality. Focused Build provides pre-configured standard SAP Solution Manager features and processes,

as well as additional build functions, such as requirements management, change request management, test management, and release management. Focused Build also provides best practices, methodologies, and templates to support the

implementation of SAP solutions.

C is correct because SAP delivers a standard solution without any additional coding required as part of the Focused Build for SAP Solution Manager functionality. Focused Build is a ready-to-run and integrated tool that enables customers to

manage requirements and software development in large, agile projects. Focused Build does not require any additional coding or customization to use its features and functions.
