QUESTION 1

The Marketing department would like to send special offers to customers who have placed a specified number of orders. This can be done by creating a custom function that must be called when a customer

order is placed. You want to create a custom function to accept the input parameters of the Customer ID, and the number of orders required to receive a special order, check the Orders table, and then create an initial list of eligible customers.

How to Create a new batch job and data flow, called Alpha_Marketing_Offer_Job and _Marketing_Offer_DF respectively, and a new global variable \$G_Num_to_Qual.

- A. In the Smart Editor, choose the Variables tab.
- B. Right click Parameters and choose Insert.
- C. In the project area, right click the Omega project and choose New batch job
- D. Enter the name Alpha_Marketing_Offer_Job.
- E. In the tool palette, select the Data Flow icon and click in the workspace.
- F. Enter the name Alpha_Marketing_Offer_DF.

Correct Answer: CDEF

QUESTION 2

How to Save and execute the Alpha_NACustomer_Job?

- A. In the main menu, choose Project Save All and To save all changes, choose OK
- B. In the Project Area , right click the Alpha_NACustomer_Job and choose Execute and To accept the default execution properties, choose OK
- C. To return to the Job workspace, in the tool bar, choose the Back icon and To return to the Data Flow workplace, double click the Data Flow.
- D. In the Query editor, choose the WHERE tab

Correct Answer: ABC

QUESTION 3

How to Use a WHERE clause to select only customers in North America (North American countries are United States, Canada, and Mexico which have COUNTRYID values of 1, 2,and 11)?

- A. In the Query editor, choose the WHERE tab

- B. Enter the where clause, customer.COUNTRYID in (1,2,11)
- C. To save all changes, choose OK
- D. Confirm that 22 records were loaded

Correct Answer: AB

QUESTION 4

You must calculate the total value of all orders, including their discounts, for reporting purposes. Currently these details are found in different tables. Use the sum function to calculate the total value of orders in the Order_Details table. How to Now that the expression can calculate the total of the order values, make it possible for the Query to begin at the first order through the end of the records in the table by using the Group By tab.

- A. On the Mapping tab of the TOTAL_VALUE column, enter the expression:
- B. In the Query Editor , select the Group By tab.
- C. In the Schema In column, select the ORDERID field from the ORDER_DETAILS table and drag it to the Group By tab.
- D. Close the Editor.

Correct Answer: BCD

QUESTION 5

You must ensure that all records from the Customer table in the Alpha database are being moved to the Delta staging database using the audit logs. In the Local Object Library, replicate the Alpha_NACustomer_DF data flow. Name the replicated data flow Alpha_AuditCustomer_DF . Add the replicated data flow to a new job, Alpha_AuditCustomer_Job . Set up auditing on the data flow Alpha_AuditCustomer_DF by adding an audit rule to compare the total number of records in the source and target tables. How to Save all changes and execute the job with auditing enabled and Trace Audit Data set to Yes.

- A. Right-click the Alpha_AuditCustomer_Job and choose Execute .
- B. To remove the existing audit rule, choose Delete
- C. Choose Add and select Custom.
- D. In the Execution Properties dialog box, in the Execution Options tab, select the Enable auditing checkbox.
- E. In the Trace tab, choose Trace Audit Data .
- F. In the Value field, using the drop down list, change the value to Yes .

Correct Answer: ADEF
