-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

### QUESTION 1

In Hyperledger Fabric, Public Key Infrastructure is used to generate cryptographic certificates which are not tied to:

- A. organizations
- B. network components and infrastructure
- C. end users
- D. Jbrowser
- E. components

Correct Answer: A

---

### QUESTION 2

In Hyperledger Fabric there is three types of chaincode. (Select three.)

- A. Private
- B. Hybrid
- C. Access Controlled
- D. Consortium
- E. Public
- F. Compliant

Correct Answer: ACE

---

### QUESTION 3

Chaincode in Hyperledger Fabric is a decentralized transactional program which is running on the validating nodes. Chaincode implements the Chaincode interface in particular, Init and Invoke functions. Which two statements about Chaincode is correct? (Select two.)

- A. Init is called during instantiate transaction after the chaincode container has been established for the first time, allowing the chaincode to initialize its internal data
- B. Invoke is called to update or query the ledger after a proposal transaction. Update state variables are committed to the ledger before the transaction is committed
- C. Init is called during Instantiate transaction after the chaincode ledger has been established for the first time, allowing the chaincode to initialize its internal data
- D. Invoke is called to update or query the ledger in a proposal transaction. Updated state variables are not committed to the ledger until the transaction is committed.

Correct Answer: AD

Chaincode is a decentralized transactional program, running on the validating nodes. As with every chaincode, it implements the Chaincode interface in particular, Init and Invoke functions. Init is called during Instantiate transaction after the chaincode container has been established for the first time, allowing the chaincode to initialize its internal data. Invoke is called to update or query the ledger in a proposal transaction. Updated state variables are not committed to the ledger until the transaction is committed.

---

#### QUESTION 4

The business network definitions are packaged into what file?

- A. .cto
- B. .acl
- C. .bnd
- D. .bna

Correct Answer: D

Explanation. bna is also known as a "banana" file in the hyperledger world. Before a business network definition can be deployed it must be packaged into a Business Network Archive (.bna) file. The composer archive create command is used to create a business network archive file from a business network definition folder on disk.

---

#### QUESTION 5

You would like to download Hyperledger Fabric. What would be the command to start the process?

- A. `ftp clone https://github.com/hyperledger/fabric.sh`
- B. `git clone https://github.com/hyperledger/fabric.git`
- C. `ftp clone https://github.com/hyperledger/fabric.git`

Correct Answer: B
