#### QUESTION 1

What is the process of turning cipher-text back into plaintext called?

- A. Packing
- B. Encryption
- C. Decryption
- D. Hashing

Correct Answer: C

---

#### QUESTION 2

Chaincode interface must be implemented by every chaincode program.

- A. TRUE
- B. FALSE

Correct Answer: A

---

#### QUESTION 3

When deploying a database option there are some important things to consider from a deployment perspective. CouchDB and LevelDB can be deployed with Fabric. Which of the following is a true statement in regards to ledger deployment?

- A. A CouchDB database is closely co-located with a network node and runs in a separate operating system process
- B. A LevelDB database is closely co-located with a network node and runs in a separate operating system process
- C. A CouchDB database is closely co-located with a network node and it is embedded within the same operating system process
- D. A LevelDB database is closely co-located with a network node and it is embedded within the same operating system process

Correct Answer: D

A CouchDB database is closely co-located with a network node and it is embedded within the same operating system process.

---

#### QUESTION 4

What type of organization can be thought of as a corporation run without any human involvement under the control of an incorruptible set of business rules?

- A. Limited Liability Corporation
- B. Decentralized Autonomous Organization (DAO)
- C. Corporation
- D. Trust

Correct Answer: B

Decentralized Autonomous Organization (DAO) can be thought of as a corporation run without any human involvement under the control of an incorruptible set of business rules. A DAO can also be seen as the most complex form of a smart contract, where the bylaws of the decentralized organization are embedded into the code of the smart contract, using complex token governance rules.

---

#### QUESTION 5

You're currently investigating Hyperledger and would like to confirm that there is a set of collaboration tools for building blockchain business networks that accelerate the development of smart contracts and blockchain applications.

What is the solution that meets the requirement?

- A. Hyperledger Explorer
- B. Hyperledger Composer
- C. Hyperledger Quilt
- D. Hyperledger Cello

Correct Answer: B

Composer (contributed by IBM and Oxchains) is a set of collaboration tools for building blockchain business networks that accelerate the development of smart contracts and blockchain applications, as well as their deployment across a distributed ledger.
