QUESTION 1

Which of the following is the concept of segregating information or processes, within the same system or application, for security reasons?

- A. Cell blocking
- B. Sandboxing
- C. Pooling
- D. Fencing

Correct Answer: B

Sandboxing involves the segregation and isolation of information or processes from other information or processes within the same system or application, typically for security concerns. Sandboxing is generally used for data isolation (for example, keeping different communities and populations of users isolated from others with similar data). In IT terminology, pooling typically means bringing together and consolidating resources or services, not segregating or separating them. Cell blocking and fencing are both erroneous terms.

QUESTION 2

What is the biggest challenge to data discovery in a cloud environment?

- A. Format
- B. Ownership
- C. Location
- D. Multitenancy

Correct Answer: C

With the distributed nature of cloud environments, the foremost challenge for data discovery is awareness of the location of data and keeping track of it during the constant motion of cloud storage systems.

QUESTION 3

Which of the following attempts to establish an international standard for eDiscovery processes and best practices?

- A. ISO/IEC 31000
- B. ISO/IEC 27050
- C. ISO/IEC 19888
- D. ISO/IEC 27001

Correct Answer: B

ISO/IEC 27050 strives to establish an internationally accepted standard for eDiscovery processes and best practices. It encompasses all steps of the eDiscovery process: identification, preservation, collection, processing, review, analysis, and the final production of the requested data.

QUESTION 4

Which cloud storage type is typically used to house virtual machine images that are used throughout the environment?

- A. Structured
- B. Unstructured
- C. Volume
- D. Object

Correct Answer: D

Object storage is typically used to house virtual machine images because it is independent from other systems and is focused solely on storage. It is also the most appropriate for handling large individual files. Volume storage, because it is allocated to a specific host, would not be appropriate for the storing of virtual images. Structured and unstructured are storage types specific to PaaS and would not be used for storing items used throughout a cloud environment.

QUESTION 5

What is the primary reason that makes resolving jurisdictional conflicts complicated?

- A. Different technology standards
- B. Costs
- C. Language barriers
- D. Lack of international authority

Correct Answer: D

With international operations, systems ultimately cross many jurisdictional boundaries, and many times, they conflict with each other. The major hurdle to overcome for an organization is the lack of an ultimate international authority to mediate such conflicts, with a likely result of legal efforts in each jurisdiction.
