QUESTION 1

Which privacy engineering objective proposed by the US National Institute of Science and Technology (NIST) decreases privacy risk by ensuring that connections between individuals and their personal data are reduced?

- A. Disassoc lability
- B. Manageability
- C. Minimization
- D. Predictability

Correct Answer: A

disassociability is a privacy engineering objective proposed by the US National Institute of Science and Technology (NIST) that decreases privacy risk by ensuring that connections between individuals and their personal data are reduced.

QUESTION 2

What has been identified as a significant privacy concern with chatbots?

- A. Most chatbot providers do not agree to code audits
- B. Chatbots can easily verify the identity of the contact.
- C. Users\' conversations with chatbots are not encrypted in transit.
- D. Chatbot technology providers may be able to read chatbot conversations with users.

Correct Answer: D

QUESTION 3

A company configures their information system to have the following capabilities:

Allow for selective disclosure of attributes to certain parties, but not to others.

Permit the sharing of attribute references instead of attribute values - such as "I am over 21" instead of birthday date.

Allow for information to be altered or deleted as needed.

These capabilities help to achieve which privacy engineering objective?

- A. Predictability.
- B. Manageability.

- C. Disassociability.
- D. Integrity.

Correct Answer: C

QUESTION 4

Which of the following activities would be considered the best method for an organization to achieve the privacy principle of data quality?

- A. Clash customer information with information from a data broker
- B. Build a system with user access controls and approval workflows to edit customer data
- C. Set a privacy notice covering the purpose for collection of a customer's data
- D. Provide a customer with a copy of their data in a machine-readable format

Correct Answer: B

building a system with user access controls and approval workflows to edit customer data would be considered the best method for an organization to achieve the privacy principle of data quality.

QUESTION 5

SCENARIO

Please use the following to answer the next question:

Chuck, a compliance auditor for a consulting firm focusing on healthcare clients, was required to travel to the client's office to perform an onsite review of the client's operations. He rented a car from Finley Motors upon arrival at the airport as so he could commute to and from the client's office. The car rental agreement was electronically signed by Chuck and included his name, address, driver's license, make/model of the car, billing rate, and additional details describing the rental transaction. On the second night, Chuck was caught by a red light camera not stopping at an intersection on his way to dinner. Chuck returned the car back to the car rental agency at the end week without mentioning the infraction and Finley Motors emailed a copy of the final receipt to the address on file.

Local law enforcement later reviewed the red light camera footage. As Finley Motors is the registered owner of the car, a notice was sent to them indicating the infraction and fine incurred. This notice included the license plate number, occurrence date and time, a photograph of the driver, and a web portal link to a video clip of the violation for further review. Finley Motors, however, was not responsible for the violation as they were not driving the car at the time and transferred the incident to AMP Payment Resources for further review. AMP Payment Resources identified Chuck as the driver based on the rental agreement he signed when picking up the car and then contacted Chuck directly through a written letter regarding the infraction to collect the fine.

After reviewing the incident through the AMP Payment Resources' web portal, Chuck paid the fine using his personal credit card. Two weeks later, Finley Motors sent Chuck an email promotion offering 10% off a future rental.

What is the most secure method Finley Motors should use to transmit Chuck's information to AMP Payment Resources?

- A. Cloud file transfer services.

B. Certificate Authority (CA).

C. HyperText Transfer Protocol (HTTP).

D. Transport Layer Security (TLS).

Correct Answer: D

TLS is a cryptographic protocol that provides secure communication over a network. It can help protect against eavesdropping and tampering by encrypting data in transit. Cloud file transfer services (option A) can also provide secure transmission of data but their security depends on the specific service used. Certificate Authority (CA) (option B) is not a method for transmitting data but rather a trusted third party that issues digital certificates used for authentication. HyperText Transfer Protocol (HTTP) (option C) is not a secure method for transmitting sensitive data as it does not provide encryption.
