QUESTION 1

CORRECT TEXT

Given a container that writes a log file in format A and a container that converts log files from format A to format B, create a deployment that runs both containers such that the log files from the first container are converted by the second container, emitting logs in format

Task:

1.
Create a deployment named deployment-xyz in the default namespace, that:
2.
Includes a primary
Ifccncf/busybox:1 container, named logger-dev
3.
Includes a sidecar Ifccncf/fluentd:v0.12 container, named adapter-zen Mounts a shared volume /tmp/log on both containers, which does not persist when the pod is deleted
4.
Instructs the logger-dev
container to run the command

```
while true; do  
echo "i luv cncf" >> /  
tmp/log/input.log;  
sleep 10;  
done
```

which should output logs to /tmp/log/input.log in plain text format, with example values:

```
i luv cncf  
i luv cncf  
i luv cncf
```

The adapter-zen sidecar container should read /tmp/log/input.log and output the data to /tmp/log/output.* in Fluentd JSON format. Note that no knowledge of Fluentd is required to complete this task: all you will need to achieve this is to create the ConfigMap from the spec file provided at /opt/KDMC00102/fluentd-configmap.yaml , and mount that ConfigMap to /fluentd/etc in the adapter-zen sidecar container

A. Please check explanations

B. Place Holder

Correct Answer: A

```
student@node-1:~$ kubectl create deployment deployment-xyz --image=lfccncf/busybox:1 --dry-run=c  
lient -o yaml > deployment_xyz.yml  
student@node-1:~$ vim deployment_xyz.yml
```

student@node-1:~$

```

QUESTION 2

CORRECT TEXT

Context

A project that you are working on has a requirement for persistent data to be available.

Task

To facilitate this, perform the following tasks:

1.

Create a file on node sk8s-node-0 at /opt/KDSP00101/data/index.html with the content Acct=Finance

2.

Create a PersistentVolume named task-pv-volume using hostPath and allocate 1Gi to it, specifying that the volume is at /opt/KDSP00101/data on the cluster's node.

The configuration should specify the access mode of ReadWriteOnce. It should define the StorageClass name exam for the PersistentVolume, which will be used to bind PersistentVolumeClaim requests to this PersistentVolume.

1.

Create a PersistentVolumeClaim named task-pv-claim that requests a volume of at least 100Mi and specifies an access mode of ReadWriteOnce

2.

Create a pod that uses the PersistentVolumeClaim as a volume with a label app: my-storage-app mounting the resulting volume to a mountPath /usr/share/nginx/html inside the pod

You can access `sk8s-node-0` by  issuing the following command:

```
[student@node-1] $ | ssh sk8s-node-0
```

Ensure that you return to the  base node (with hostname `node-1`) once you have completed your work on `sk8s-node-0` 

A. Please check explanations

B. Place Holder

Correct Answer: A

```
Readme Web Terminal THE LINUX FOUNDATION
student@node-1:~$ kubectl config use-context sk8s
Switched to context "sk8s".
student@node-1:~$
```

QUESTION 3

CORRECT TEXT

Context

You have been tasked with scaling an existing deployment for availability, and creating a service to expose the deployment within your infrastructure.

Task

Start with the deployment named `kdsn00101-deployment` which has already been deployed to the namespace `kdsn00101`. Edit it to:

1.
Add the `func=webFrontEnd` key/value label to the pod template metadata to identify the pod for the service definition

2.

Have 4 replicas

Next, create and deploy in namespace `kdsn00101` a service that accomplishes the following:

1.

Exposes the service on TCP port 8080

2.

is mapped to the pods defined by the specification of `kdsn00101-deployment`

3.

Is of type `NodePort`

4.

Has a name of cherry

A. Please check explanations

B. Place Holder

Correct Answer: A

```
student@node-1:~$ kubectl edit deployment kdsn00101-deployment -n kdsn00101
```

```

QUESTION 4

CORRECT TEXT

Task

A deployment is falling on the cluster due to an incorrect image being specified. Locate the deployment, and fix the problem.

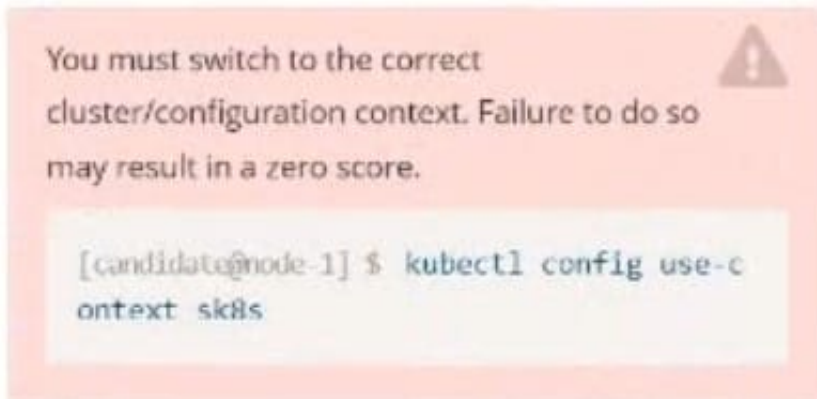

- A. Please check explanations
- B. Place Holder

Correct Answer: A

create deploy hello-deploy --image=nginx --dry-run=client -o yaml > hello-deploy.yaml Update deployment image to nginx:1.17.4: kubectl set image deploy/hello-deploy nginx=nginx:1.17.4

QUESTION 5

CORRECT TEXT

Task:

Modify the existing Deployment named broker-deployment running in namespace quetzal so that its containers.

The broker-deployment is manifest file can be found at:

```
~/daring_moccasini/broker-deployment.yaml
```

- A. Please check explanations
- B. Place Holder

Correct Answer: A

```
candidate@node-1:~$ kubectl config use-context k8s
Switched to context "k8s".
candidate@node-1:~$ vim
```

File Edit View Terminal Tabs Help

```
containers:
- name: broker
  image: redis:alpine
  ports:
  - containerPort: 6379
  securityContext:
    runAsUser: 30000
    privileged: false
```

:wq

```
candidate@node-1:~$ kubectl config use-context k8s
Switched to context "k8s".
