### QUESTION 1

Given the following figures for the testing on a project, and assuming the failure rate for initial tests remains constant and that all retests pass, what number of tests remain to be run?

Test planned	1000
Initial tests run	500
Initial tests passed	350
Retests run	80

- A. 700
- B. 720
- C. 784
- D. 570

Correct Answer: B

---

### QUESTION 2

Which of the following statements is correct about Statement coverage and Decision coverage?

- A. 100% Statement coverage guarantees 100% Decision coverage
- B. 100% Decision coverage guarantees 100% Statement coverage
- C. 100% Decision coverage never guarantees 100% Statement coverage
- D. 100% Decision coverage may also guarantee 100% Statement coverage

Correct Answer: B

---

### QUESTION 3

Which of the following statements correctly emphasize the viewpoint of a developer and a tester with respect to the testing psychology?

- A. If a developer implements a fundamental design error (e.g. conceptual misunderstanding), it is HIGHLY probable that he/she will not find is using own tests.
- II. The tester can observe the object to be tested without prejudices. It is not his/her own product and the assumptions and misunderstandings of the developer are not, in general, the same as those of the tester.
- III. An independent tester must acquire knowledge about the object to be tested in order to create test cases; the developer has good knowledge of the object to be tested and this saves time: hence, it is advisable to assign the test activities to the developer

IV. The weakness of the tests done by the developer is that developers tend to be optimistic about their own software. The risk is that reasonable test cases are forgotten because the developer is more interested in development than testing.

B. I, II, III

C. I, II, IV

D. I, II

E. III, IV

Correct Answer: D

---

#### QUESTION 4

Which of the following is a white-box test technique?

A. Decision table testing

B. Exploratory testing

C. Statement testing

D. Error guessing

Correct Answer: C

---

#### QUESTION 5

Which of the following would be LEAST appropriate as part of an incident report covering the observation of a failure during testing?

A. The expected result for the `list friends` response time was less than 10 seconds, whereas the average response obtained was 13 seconds.

B. The user interface was complicated and confusing and I found it quite difficult to follow the test script.

C. The updates made as part of the `add new member` function did not reflect the expected change as the name was written into the address field.

D. SQL injection into the username entry field allowed a variety of SQL commands to be executed by the application without the appropriate authority.

Correct Answer: B
