#### QUESTION 4

The system administrator created a file sharing service to the cloud for easier access for those working remotely. Which of the following tests should be performed to determine if services can be compromised?

- A. Test storage
- B. Test latency
- C. Vulnerability assessment
- D. Penetration testing

Correct Answer: D

---

#### QUESTION 5

A cloud administrator is given a requirement to maintain a copy of all system logs for seven years. All servers are deployed in a public cloud provider's environment. Which of the following is the MOST cost-efficient solution for retaining these logs?

- A. Create a long-term storage repository at the cloud provider. Have all logs copied to the cloud storage device.
- B. Schedule a nightly job on each server to archive all logs. Copy them to a compressed drive on the server.
- C. Configure SMTP services on each server and schedule a nightly job to email the logs to the cloud administrator team's email account.
- D. Configure a nightly job on each server to copy all logs to a single server. Schedule a job on the server to archive those logs into a compressed drive.

Correct Answer: B
