QUESTION 1

DRAG DROP

In a recovery operation, what is the correct sequence of steps after the backup client sends a restore request to the backup server?

Select and Place:

Options	Steps
Storage node sends the restored metadata to the backup server	STEP 1
Data is read and then sent to the backup client	STEP 2
Backup server scans the backup catalog to identify the data to be restored and the client that will receive the data	STEP 3
Backup server updates the backup catalog	STEP 4
Backup server instructs the storage node to load the backup media in the backup device	STEP 5

Correct Answer:

	Backup server instructs the storage node to load the backup media in the backup device
	Backup server scans the backup catalog to identify the data to be restored and the client that will receive the data
	Storage node sends the restored metadata to the backup server
	Data is read and then sent to the backup client
	Backup server updates the backup catalog

QUESTION 2

A company is planning to perform a cloud-based backup. They want to send their data over a public network to a cloud backup device. Which security control mechanism helps to protect the data from an attacker?

A. Multi-factor authentication

B. Demilitarized zone

C. Data shredding

D. Encryption

Correct Answer: D

QUESTION 3

Why are organizations moving towards a modern data center implementation?

A. Develop modern applications in the public cloud without having the right skill set in-house.

B. Ability to be agile, operate in real time, and develop intelligent products.

C. Deploy only unified and converged IT resources to reduce the management complexity.

D. Reduce the cost of managing data center components by using a self-service catalog.

Correct Answer: C

QUESTION 4

Which state change notifications (SCNs) are issued by an iSNS server to the registered devices?

A. CPU events

B. Output events

C. Input events

D. Network events

Correct Answer: D

The State Change Notification (SCN) service allows the iSNS Server to issue notifications about network events that affect the operational state of Storage Nodes. The iSNS client may register for notifications on behalf of its Storage Nodes for notification of events detected by the iSNS Server.
