### QUESTION 1

An organization has deployed a cloud infrastructure. They frequently experience power outages that result in their service offerings being unavailable from time to time.

What term refers to this condition?

- A. Transient unavailability
- B. In-transient unavailability
- C. Permanent unavailability
- D. Intermittent unavailability

Correct Answer: A

---

### QUESTION 2

What is the function of a monitoring and alerting tool?

- A. Focus on examining the usage of resources by customers and service providers and provide notification to optimize and manage workloads
- B. Control charges for cloud usage by optimizing cloud resource utilization
- C. Automate tasks and IT processes and manage the IT environment
- D. Enable people to work closely together on a common project, in real time, by making communication among them easier

Correct Answer: A

---

### QUESTION 3

In which technique does an application maintain limited functionality, even when some of the modules or supporting services of that application become unavailable?

- A. Retry logic
- B. Persistent state model
- C. Graceful degradation
- D. Checkpointing

Correct Answer: C

---

### QUESTION 4

---

A specific intrusion detection and prevention system (IDPS) scans events against known attack patterns. Which technique is the IDPS using?

- A. Plug-in-based detection
- B. Signature-based detection
- C. Device-based detection
- D. Anomaly-based detection

Correct Answer: B

---

#### QUESTION 5

A cloud service provider uses a resource pooling approach to improve the utilization of resources by sharing them with multiple customers. What mechanism should the cloud provider deploy to prevent one consumer from accessing the virtual machines of another consumer?

- A. Hypervisor-based resource pooling
- B. Secure multitenancy through isolation
- C. Pooling of resources through multitenancy
- D. Virtual machine-based resource pooling

Correct Answer: C
