### QUESTION 2

A Spectrum Protect administrator is configuring VTL on PowerProtect DD. Which tape driver type should they select?

- A. L180
- B. L2000
- C. TS3500
- D. L6000

Correct Answer: C

### QUESTION 3

An administrator has retained snapshots for a single MTree and is trying to create a new one. An error message is received. What is the reason for the failure?

- A. The maximum number of snapshots has been exceeded
- B. The DDOS needs to be upgraded
- C. The user does not have the permission to retain more snapshots
- D. There are not enough snapshot licenses

Correct Answer: A

Explanation: The maximum number of snapshots allowed per MTree is 750. Warnings are sent when the number of snapshots per MTree reaches 90% of the maximum allowed number (from 675 to 749 snapshots), and an alert is

generated

when the maximum number is reached. To clear the warning, expire snapshots and then run the file system cleaning operation.

Note: To identify an MTree that is nearing the maximum number of snapshots, check the Snapshots panel of the MTree page regarding viewing MTree snapshot information.

#### QUESTION 4

What is a characteristic of using replication with Dell EMC Cloud Tier?

- A. Always takes place between the source and destination cloud tier
- B. Cloud Tier is required to be configured on the source and destination systems
- C. Always takes place between the source and destination active tier
- D. Does not require that a file be recalled from the cloud on the source

Correct Answer: C

---

#### QUESTION 5

An administrator wants to integrate a PowerProtect DD appliance into their current backup environment using CIFS, NFS, DD Boost, and VTL. Which backup applications support these protocols?

- A. Commvault Simpana and Veritas Backup Exec
- B. Veritas NetBackup and Dell EMC NetWorker
- C. Dell EMC Avamar and Dell EMC NetWorker
- D. IBM Spectrum Protect and Veritas NetBackup

Correct Answer: B
