QUESTION 1

Until an Apex Sharing Reason is created, a record of a custom object cannot be shared manually on a one-off basis.

- A. True
- B. False

Correct Answer: B

QUESTION 2

What are Apex Sharing reasons?

Correct Answer: Can be created declaratively but are used by developers to define reasons for access. Apex sharing reasons can be also selected when manually sharing a record. Exist only for custom objects.

QUESTION 3

An Apex Sharing Reason cannot be created on a custom object with the label 'Manual Sharing' because the in-built standard sharing reason provided by Salesforce has the same label, so it would give error

"An Apex Sharing Reason with this name already exists"

- A. True
- B. False

Correct Answer: B

QUESTION 4

Which of these can edit a record during an approval process?

- A. Only Administrator
- B. Only Current approver
- C. Both of above

Correct Answer: AC

QUESTION 5

What is the difference between Apex Data Loader and Import Wizard as far as generating extra accounts is

concerned?

Correct Answer: Apex Data Loader If Salesforce account ID is specified incorrectly while loading contact, then loading of contact fails as no account exists in Salesforce with this account ID. Import Wizard. If account name is specified incorrectly while loading contact, then new account gets generated with the new name.
