QUESTION 1

Universal Containers has a highly customized Salesforce org, with many different pieces of configuration and code.
Which configuration item should be covered by executable tests?

A. Active Process Builders

B. Validation Rules

C. Workflow Rules

D. Case Assignment Rules

Correct Answer: A

QUESTION 2

Universal Containers (UC) is implementing Salesforce and wants the custom code to be unit tested for all the adverse
conditions. Which two best practices should an Architect recommend while implementing Test Classes? Choose 2
answers

A. Execute test classes under various profiles

B. Test classes should not create custom setting data.

C. Test classes must use existing data in the environment.

D. Test data must have positive as well as negative data.

Correct Answer: AD

QUESTION 3

Universal Containers has five development teams. The performance of the teams has been good, but the number of
bugs has been increasing. After each sprint, they need more time to understand the code and make changes.

What are two ways to improve the performance?

Choose 2 answers

A. Define a team that will analyze/approve all changes.

B. Define and follow code standards.

C. Sprint review process.

D. Version control system to identify who is generating the bugs.

Correct Answer: BC

QUESTION 4

Universal Containers has three types of releases in their release management strategy:

daily, minor (monthly), and major (quarterly). A user has requested a new report to support an urgent client request.

What release strategy would an Architect recommend?

A. Utilize the major release process to create the report directly in production bypassing the full sandbox.

B. Utilize the minor release process to create the report directly in production bypassing the full sandbox.

C. Utilize the major release process to create the report in a full sandbox and then deploy it to production.

D. Utilize the daily release process to create the report directly in a full sandbox and then deploy it to production.

Correct Answer: D

QUESTION 5

Universal Containers CUC) has multi-cloud architecture in a single org. The Sales Cloud dev team is working in a Dev Pro sandbox (DevProl) of delivering a release In three months. The business requirements from Service Cloud warrant a quicker release in four weeks, but need part of the Sales Cloud work that is completed in DevProl. The decision of using a separate Dev Pro sandbox (DevPro2) is still pending. The DevProl was upgraded to preview for next salesforce major release two weeks ago.

What should an Architect recommend?

A. Ask the second work stream team to work on the same DevProl sandbox.

B. Clone the DevPro1 sandbox and name It DevPro2 for the second work stream to work on the Service Cloud requirements.

C. Push back on the requirements because adding another work stream will bring some risks with it.

D. DevPro1 cannot be cloned because it is on a different version from Production. Just create a new DevPro2, and migrate metadata from DevPro1.

Correct Answer: B
