QUESTION 1

A company wants to increase production stability. They have already automated all testing of new releases.

What else do they need to automate to increase production stability?

- A. Change management process
- B. Integration of release with deployment management
- C. Root cause inventories for recovery
- D. Release inventories for recovery
- E. System and application monitoring

Correct Answer: E

QUESTION 2

Why is reducing the fragility of a business system difficult?

- A. Because doing so will disrupt the current product and service timelines
- B. Because doing so will increase the number of incidents that occur temporarily
- C. Because it is difficult to deliberately introduce chaos into the Production environment
- D. Because of the high risks of business disruption when integrating large numbers of systems

Correct Answer: D

QUESTION 3

An IT architecture is characterized as monolithic and rigidly bound.

What difficulty with adopting DevOps practices can be expected?

- A. Clearly defining the boundaries of the IT systems
- B. Defining areas of responsibility for each DevOps team
- C. Maintaining the increasingly complex architecture

Correct Answer: B

QUESTION 4

Even more than Agile or Scrum, DevOps encourages continuous delivery of new functionality and continuous feedback from the customer.

What does this achieve?

- A. It increases the team's responsibility
- B. It improves customer relations
- C. It yields a greater return on IT

Correct Answer: C

QUESTION 5

Waterfall development was causing certain problems by not delivering what the business needed. Agile addressed some of these problems.

What is a Waterfall feature that is no longer used in Agile?

- A. Delivery of small batches of working software
- B. Delivery of software based on customers' needs
- C. Sequential execution of predetermined stages
- D. Using a programming language suitable for the business

Correct Answer: C
