QUESTION 1

Ian organization wants to protect the cloud management platform (CMP) from loss due to a site disaster. To support this requirement, the completed cloud design deliverables include the processes and procedures for restoring CMP functionality.

What other item should be included in the deliverables to support this requirement?

- A. Recovery validation and verification processes
- B. Data abstraction keys
- C. List of all consumer service IP addresses
- D. Document containing the data encryption keys

Correct Answer: A

QUESTION 2

An organization is developing a cloud-native social-media website. The website will be written using elastic principles. When the website scales, it can add additional web, application and database instances to meet dynamic workload demand.

Which additional resources will be consumed by replication as the database layer expands.

- A. Public IP addresses, CPU, and memory
- B. CPU, memory, and network traffic
- C. Network traffic, public IP addresses, and CPU
- D. Memory, network traffic, and public IP addresses

Correct Answer: B

QUESTION 3

What needs to be considered when designing a distributed storage solution?

- A. Multiple management tools
- B. Fault domain detection and isolation to ensure data availability
- C. RAID configuration to ensure a drive failure is avoided
- D. Automated storage tiering to enable efficient use of drive

Correct Answer: B

QUESTION 4

A cloud architect is evaluating an organization's need to support thousands of virtual machine instances and some form of encryption. Which encryption type should be selected and why?

- A. Storage array encryption to provide centralized management
- B. Full file systems encryption to simplify key management
- C. Network-based encryption to increase security at the cost of server overhead
- D. Self-encrypting storage devices to increase security at the cost of increased overhead

Correct Answer: B

QUESTION 5

If the metering tool supports multi-tenancy and integrates with the cloud portal, what should be considered?

- A. Only permit local user access for security reasons
- B. Metering tool should not integrate with tenant authentication
- C. Metering server access should be allowed for all tenants
- D. Role-based access for security reasons

Correct Answer: D
