QUESTION 1

You are designing consumer compute resources in an onsite private cloud. During an assessment, you discover that the organization's IT staff wants secure access to the underlying host OS. What should be included in the design to support this requirement?

- A. Host IDS configuration Secure key infrastructure Bridged management network
- B. Perimeter firewall configuration VPN encryption Separate management network
- C. Host OS firewall configuration Central logging Physically isolated management network
- D. Host OS firewall configuration Secure key infrastructure Separate management network

Correct Answer: B

QUESTION 2

A cloud architect discovers that an organization wants to deploy 500 consumer applications initially and grow to over 2000 consumer applications in three years. These applications will use block storage only. How does the information impact the cloud management platform infrastructure sizing?

- A. Influences proxy server data storage requirements
- B. Influences CDN data storage requirements
- C. Influences federation server data storage requirements
- D. Influences monitoring server storage requirements

Correct Answer: C

QUESTION 3

During an assessment for an organization's cloud design, a cloud architect discovers that developers will be creating applications for tenants. The applications will self-scale based on an internal trigger. The architect has included cloud management platform (CMP) components in the design that will support this requirement. To meet this requirement, what else should the cloud architect consider?

- A. Mechanisms exist for assigning IP addresses and updating DNS
- B. Mechanisms exist for changing host CPU over-commitment ratios
- C. A CMP account with elevated privileges exists that can be shared with developers
- D. Component APIs are located on an isolated network

Correct Answer: B

QUESTION 4

Which authentication and authorization feature is critical for service providers when supporting multi-tenancy?

- A. Integration with external authentication services
- B. Integration with external directory services
- C. Portal authentication services
- D. Single sign-on capability

Correct Answer: A

QUESTION 5

An organization wants to include performance monitoring in their cloud environment. However, they want to minimize the number of accounts and passwords that must be created on target devices and sent across the network.

Which monitoring solution should a cloud architect recommend to meet this requirement?

- A. Proxy
- B. Agent-based
- C. Agentless
- D. Central

Correct Answer: D
