QUESTION 1

A. 1		
B. 10		
C. 25		
D. 30		
Correct Answer: B		
QUESTION 2		

Which Unity service task is used to reinstall the root operating system while leaving the user\\'s data intact?

- A. Restore the Management server
- B. Reimage the Storage Processor
- C. Restore the Management software
- D. Reinitialize the storage system

Correct Answer: B

Re-image a storage processor (SP) to safely fix problems with the system software that could not be resolved by rebooting the SP. Re-imaging analyzes the system software for errors and attempts to correct them instantly. Re-image an SP

from the Service System page.

Your configuration settings and stored files will not be changed.

If the data can be compressed, the metadata is updated and STEP 1 the compressed data is written to disk. If the data can be deduplicated, metadata is updated. STEP 2 If the data cannot be compressed, the data is written STEP 3 to disk in a non-deduplicated and uncompressed format. Data reduction logic determines if the data can be STEP 4 deduplicated using zero and pattern detection. If the data cannot be deduplicated, the data is passed to the STEP 5 compression logic to test for possible reduction.

Data reduction logic determines if the data can be deduplicated using zero and pattern detection.
If the data can be deduplicated, metadata is updated.
If the data cannot be deduplicated, the data is passed to the compression logic to test for possible reduction.
If the data can be compressed, the metadata is updated and the compressed data is written to disk.
If the data cannot be compressed, the data is written to disk in a non-deduplicated and uncompressed format.

QUESTION 4

Which protocol(s) is used to access VMware VMFS datastores from Unity?

- A. Fibre Channel over IP
- B. iSCSI and Fibre Channel
- C. Fibre Channel only
- D. iSCSI only

Correct Answer: B
