QUESTION 1

A storage administrator wants to configure a Unity system to log system events to a remote log server. In order to allow access to the log server, which port should the administrator ensure is not blocked by the firewall?

A. 514

B. 714

C. 1000

D. 5179

Correct Answer: A

The storage system supports logging user/audit messages to a remote host. By default, the storage system transfers log information on port 514 using UDP.

QUESTION 2

How long will a Copy Back operation take when a hot spare is invoked?

A. Pro-Active hot spare does not use a Copy Back operation

B. Copy Back time depends on the RAID type

C. Copy Back time depends on the disk capacity

D. Copy Back time depends on the disk type

Correct Answer: B

Note: Starting with Release 24, you can now use a proactive hot spare for proactive disk replacement. Before Release 24 you had to remove the physical disk to replace in order to force a rebuild. During the rebuild phase, the RAID group

was "degraded" and at risk.

Resolution:

Three main benefits of using a proactive hot spare:

Avoiding "uncorrectable errors" due to media problems during the rebuild process.

Greatly reduce the risk of having a degraded RAID group, and the risk of having a double-faulted RAID group.

Performance - a copy to hot spare is faster than a normal rebuild.

QUESTION 3

What is an example of a NAS Server replication session grouped operation?

A. Delete

B. Resume

C. Sync

D. Create

Correct Answer: B

QUESTION 4

A storage administrator is considering adding another application to run on their Unity 300 but they are concerned about the application\\'s performance. They ask what is considered "normal" for CPU utilization. Based on Dell EMC best practices, what should be your response?

A. Below 50%

B. 50% - 70%

C. 70% - 90%

D. 90% - 95%

Correct Answer: B

(p.9)

QUESTION 5

A system administrator is configuring asynchronous remote replication for an existing NAS server and its associated file systems on a Unity system. What action(s) will meet the requirements?

A. Manually create replication sessions for each file system. The system will automatically create a session for the NAS Server.

B. Manually create NAS Server replication session. The system will automatically create sessions for the associated file systems.

C. Manually create replications for each associated file system. Then manually create a session for the NAS Server.

D. Manually create NAS Server replication session first. Then manually create replication sessions on each of the associated file systems.

Correct Answer: C
