QUESTION 1

When FAST.X is used to access five VNX arrays from a single VMAX3, what is the minimum number of DX ports required?

A. 4

B. 10

C. 20

D. 40

Correct Answer: C

DX directors are configured in dual initiator (DI) pairs like traditional DAs. They are fully redundant like DAs and, when necessary, a failing director fails over to the other, fully functioning director in the DI pair. EMC requires a minimum of four paths to external devices. This means that at least four ports belonging to a single DX dual-initiator pair must be configured.
