QUESTION 1

An IT department is using a number of tools to automate the expansion and contraction of the cloud resource pools. Which cloud feature are they implementing?

- A. Elasticity
- B. Monitoring
- C. Trust zones
- D. Chargeback

Correct Answer: A

QUESTION 2

The operations department of a major hosting provider is under pressure to deliver services more quickly. They have a large number of tools for managing IT technologies across the data center. Although investments in virtualization and automation have been made, it still takes months to provision basic IT services to meet new customer demands. Hence, the provider is considering offering cloud services.

What is a key focus area for driving higher operational efficiency and associated profits?

- A. Re-design and strengthen the architecture to ensure that the components within the data center are modular and can be reused
- B. Deliver customer services derived from an approved set of standardized service templates, establish change control to manage the life cycle of the templates
- C. Provide a custom capability for each customer based on analysis of the application architecture; use shared services where possible
- D. Deliver custom services using automation tools, apply change control to the tools to minimize change; develop reusable components to build environments

Correct Answer: D

QUESTION 3

Your company is an application service provider that hosts customer applications and data in your data center. The entire infrastructure is client-server based and you have begun to assess the risk of moving your web applications to a cloud-

based infrastructure. During this phase you are required to provide the value of corporate assets involved.

How should you assess these corporate assets?

- A. Use realistic valuations
- B. Create a valuation that is information-asset centric
- C. Use original purchase values
- D. Create values based on accelerated depreciation

Correct Answer: A

QUESTION 4

What is the key consideration during design phase for a service provider to ensure that they can effectively process the termination of a service instance?

- A. Archive the associated service data regardless of the user requirements
- B. Automate the de-provisioning process to release resources back into the pools
- C. Incorporate a service grace to prevent the actual deletion of the instance
- D. Create a retention period for private user data and user PCI data.

Correct Answer: B

QUESTION 5

An organization is categorizing their existing services against service characteristics to determine how ready each one might be for the catalog. Part of this effort involves looking at the following three attributes for each service characteristic: considerations, benefits, and tradeoffs.

What attributes correspond to the following characteristics: Loosely Coupled, Idempotent, and Service Contract?

- A. Consideration: late or dynamic binding of services Benefit: development and implementation cost reduction Tradeoff: complexity grows as number of services increases
- B. Consideration: late or dynamic binding of services Benefit: improves reliability and scale Tradeoff: high degree of cooperation and agreement of design standards and conventions
- C. Consideration: standardized service contracts and metadata definitions Benefit: improves reliability and scale Tradeoff: complexity grows as number of services increases
- D. Consideration: standardized service contracts and metadata definitions Benefit: development and implementation cost reduction Tradeoff: high degree of cooperation and agreement of design standards and conventions

Correct Answer: B
